Organic Farming:

Organic farming is an agricultural approach that depends on natural mechanisms to cultivate crops and rear livestock. This farming strategy abstains from the utilisation of synthetic fertilisers, pesticides, Organic farmers employ methods such as crop rotation, composting, and natural pest management to preserve soil fertility and stimulate the growth of robust plants. An eminent benefit of organic farming is its capacity to save the environment. Organic farmers prevent the introduction of toxic chemicals into the land, water, and air by refraining from using synthetic fertilisers and pesticides. Implementing this measure can effectively mitigate pollution and safeguard wildlife. Furthermore, organic farming methods frequently prioritise the well-being of the land, resulting in enhanced soil fertility and less erosion.

Organic farming can additionally contribute to the mitigation of our contact with detrimental substances. Several pesticides and herbicides often employed in traditional agriculture have been associated with various health complications, such as cancer, neurological diseases, and reproductive difficulties. Organic farmers may safeguard their personal well-being and the well-being of their consumers by refraining from using these chemicals.

In order to learn more about organic farming, our students visited a farm that is well-known in the area. With their practical experience in hand, they organise rallies to raise awareness and inspire farmers to adopt organic agricultural practices.

Save Soil Campaign:

Save soil campaign is a global movement, to address the alarming soil crisis by bringing people together from around the world so that they can stand together for looking after the proper health of the soil.

Our students went to village and informed the farmers about soil erosion, soil depletion and how to protect the health of soil through Save Soil Campaign.

As per global reports

- 52% of the agricultural soil is already degraded.
- However, 90% of the soil could become degraded by 2050.

Objectives

- To make aware the farmer to avoid over use of fertilizers soil depletion
- Reduce all forms of soil erosion from Agricultural Land
- Inform farmer to avoid more harvesting of land to stop soil depletion.
- To increase agricultural productivity in sustained manner without deteriorating the soil health.
- To restore ecological balance by augmenting, conserving & harnessing natural resources.

Outcome:

- Our students are able to convince the farmers to avoid soil erosion by not to use too much fertilizers.
- Our students promoted farmers for organic farming that can ultimately save soil
- Students also inform them minimum cultivation of land leads to save soil
- Students encourage them to follow techniques such as crop rotation, composting, and natural pest control to maintain soil health and promote the growth of healthy plants.
