Affiliated with Savitribai Phule Pune University, Pune (ID No PU/NS/ASC/027/1984)

AISHE ID: C-41965

Programme Outcomes (PO) & Course Outcomes (CO) offered by the institution are stated and displayed on websites.

Department of Botany- Academic Year 2022-23

Programme Outcome : B.Sc. (Botany)	
PO1	<ul style="list-style-type: none">Students completing this course will have understanding of morphology and anatomy of various groups of plants
PO2	<ul style="list-style-type: none">Students know about different types of lower & higher plants their evolution infrom algae to angiosperm & also their economic and ecological importance.
PO3	<ul style="list-style-type: none">Student can describe morphological & reproductive characters of plant and also identified different plant families and classification
PO4	<ul style="list-style-type: none">Use modern Botanical techniques and decent equipment's.
PO5	<ul style="list-style-type: none">To inculcates the scientific temperament in the students and outside the scientificcommunity
PO6	<ul style="list-style-type: none">They knows economic importance of various plant products & artificial methods of plant propagation

Course Outcomes: B.Sc. (Chemistry)

Class	Semester	Course Title with Sub. Code	Outcome
F.Y. B.Sc.	I	Physical Chemistry CH-101	<ul style="list-style-type: none">• Students will be able to apply thermodynamic principles to physical and chemical process• Calculations of enthalpy, Bond energy, Bond dissociation energy, resonance energy• Variation of enthalpy with temperature – Kirchoff's equation• Third law of thermodynamic and its applications
F.Y. B.Sc.	I	Organic Chemistry CH-102	<ul style="list-style-type: none">• The students are expected to understand the fundamentals, principles, and recent developments in the subject area.• It is expected to inspire and boost interest of the students towards chemistry as the main subject.• To familiarize with current and recent developments in Chemistry.• To create foundation for research and development in Chemistry.
F.Y. B.Sc.	II	Inorganic Chemistry CH-201	<ul style="list-style-type: none">• Various theories and principles applied to reveal atomic structure• Origin of quantum mechanics and its need to understand structure of hydrogen atom• Schrodinger equation for hydrogen atom• Explain rules for filling electrons in various orbitals- Aufbau's principle, Pauli exclusion principle, Hund's rule of maximum multiplicity• Discuss electronic configuration of an atom and anomalous electronic configurations
F.Y. B.Sc.	II	Analytical Chemistry CH-202	<ul style="list-style-type: none">• Calculations of mole, molar concentrations and various units of concentrations which will be helpful for preparation of solution.• Relation between molecular formula and empirical formula.• Basics of type determination, characteristic tests and classifications, reactions of different functional groups.• Basics of chromatography and types of chromatography• Theoretical background for Paper and Thin Layer Chromatography
S.Y. B.Sc.	III	CH-301 Physical & Analytical	<ul style="list-style-type: none">• Introduction to Analytical Chemistry• Define / Explain concept of kinetics, terms used, rate laws, molecularity, order, factors affecting rate of reaction.

Class	Semester	Course Title with Sub. Code	Outcome
		Chemistry	<ul style="list-style-type: none"> • Classification of Adsorption Isotherms, to derive isotherms • Solve / discuss problems using theory. • Define, explain and compare meaning of accuracy and precision. • Apply the methods of expressing the errors in analysis from results • Perform calculations involved in volumetric analysis. • Explain why indicator show colour change and pH range of colour change.
S.Y. B.Sc.	III	CH-302 Inorganic & Organic Chemistry	<ul style="list-style-type: none"> • Define terms related to molecular orbital theory • Explain and apply LCAO principle for the formation of MO's from AO's. • Apply MOT to explain bonding in diatomic molecules other than explained in syllabus • Define different terms related to the coordination chemistry • Explain Werner's theory of coordination compounds • Give the mechanism of reactions involved. • To correlate reagent and reactions • Explain / discuss synthesis of alkyl / aryl halides. To correlate reagent and reactions • Able to differentiate between alcohols and phenols
S.Y. B.Sc.	III	CH-303 Organic & Inorganic Chemistry	<ul style="list-style-type: none"> • Verify theoretical principles experimentally. • Understand systematic methods of identification of substance by chemical methods • Perform organic and inorganic synthesis • Set up the apparatus / prepare the solutions - properly for the designed experiments. • Perform the quantitative chemical analysis of substances explain principles behind it. • Systematic working skill in laboratory will be imparted in student.
S.Y. B.Sc.	IV	CH-401 Physical & Analytical chemistry	<ul style="list-style-type: none"> • Discuss meaning of phase, component and degree of freedom. • Derive of phase rule. • Define various terms, laws, differentiate ideal and no-ideal solutions. • Explain distillation of liquid solutions from temperature – composition diagram. Solve problem by applying theory • Explain / define different terms in conductometry. • Explain / discuss conductometric titrations. • Explain / define different terms in Colorimetry • Apply colorimetric methods of analysis to real problem in analytical laboratory. • Solve problems based on theory / equations. • Explain properties of adsorbents, ion exchange resins, etc.
S.Y. B.Sc.	IV	CH-402 Inorganic & Organic Chemistry	<ul style="list-style-type: none"> • Isomerism in coordination complexes • Apply principles of VBT to explain bonding in coordination compound of different geometries. • Explain principle of CFT. • Explain spectrochemical series, tetragonal distortion / Jahn-Teller effect in Cu (II) Oh complexes only. • Identify and draw the structures aldehydes, ketones amines and carboxylic acids. • Explain / discuss synthesis of aldehydes, ketones, amines and

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> carboxylic acids. Perform inter conversion of functional groups.
S.Y. B.Sc.	IV	CH-403 Practical Course in Chemistry	<ul style="list-style-type: none"> Verify theoretical principles experimentally Interpret the experimental data on the basis of theoretical principles. Understand systematic methods of identification of substance by chemical methods. Write balanced equation for all the chemical reactions performed in the laboratory. Set up the apparatus properly for the designed experiments. Perform the quantitative chemical analysis of substances and able to explain principles behind it.
T.Y. B.Sc.	V	DSEC I CH - 501: Physical Chemistry	<ul style="list-style-type: none"> Know historical of development of quantum mechanics in chemistry. Understand and explain the differences between classical and quantum mechanics. Understand the idea of wave function Understanding of De Broglie hypothesis and the uncertainty principle. Understanding the operators: Position, momentum and energy Solving Schrodinger equation for 1D, 2D and 3D model Physical interpretation of the ψ and ψ^2 and sketching the wave function Applications to conjugated systems, zero-point energy and quantum tunnelling, Numerical Problems
T.Y. B.Sc.	V	DSEC I CH - 502: Analytical Chemistry- I	<ul style="list-style-type: none"> Define basic terms in gravimetry, spectrophotometry, qualitative analysis and parameters in instrumental analysis. Such as: Gravimetry, precipitation, solubility product, ionic product, common ion effect, precipitating agent, washing of ppt., drying and ignition of ppt., linearity range, detection limit, precision, accuracy, Sensitivity, Selectivity, Robustness and Ruggedness, electromagnetic radiations, spectrophotometry, Beers law, absorbance, transmittance, molar absorptivity, monochromator, wavelength of maximum absorbance, metal ligand ration, qualitative analysis, group reagent, dry tests, wet test, confirmatory test, precipitation, thermogravimetry, thermogram, percent wt. loss, differential thermal analysis. Identify important parameters in analytical processes or estimations. Example: minimum analyte concentration in particular method, reagent concentration in particular analysis (gravimetry, spectrophotometry, thermogravimetry), reagent for particular analysis, reaction condition to convert analyte into measurable form, drying and ignition temperature for ppt in gravimetry, heating rate thermogravimetry, wavelength in spectrophotometry, group reagent, removal borate and phosphate in qualitative analysis, etc. Explain different principles involved in the gravimetry,

Class	Semester	Course Title with Sub. Code	Outcome
			<p>spectrophotometry, parameters in instrumental analysis, qualitative analysis</p> <ul style="list-style-type: none"> • Perform quantitative calculations depending upon equations student has studied in the theory. Furthermore, student should able to solve problems on the basis of theory. • Discuss / Describe procedure for different types analyses included in the syllabus. • Select particular method of analysis if analyte sample is given to him. • Differentiate / distinguish / Compare among the different analytical terms, process and analytical methods. • Demonstrate theoretical principles with help of practical. • Design analytical procedure for given sample. • Apply whatever theoretical principles he has studied in theory during practical session in laboratory.
T.Y. B.Sc.	V	DSEC-I CH-503: Physical Chemistry Practical - I	<ul style="list-style-type: none"> • To determine the specific refractivity's of the given liquids. • To determine the molecular refractivity of the given liquids. • To determine the molar refraction of homologues methyl, ethyl and propyl alcohol and show the constancy contribution to the molar refraction by -CH₂ group. • Determine the refractive index of a series of salt solutions and determine the concentration of a salt of unknown solution. • Spectrophotometry and colorimetry. To titrate Cu²⁺ ions with EDTA photometrically. • To determine the indicator constant of methyl red indicator. • To estimate of Fe³⁺ ions by thiocyanate method. Cobalt by using R-nitroso salt method. • To determine the order of reaction for the oxidation of alcohol by potassium dichromate and potassium permanganate in acidic medium calorimetrically. • Simultaneous determination of Cu²⁺ and Ni²⁺ ions by colorimetry/spectrophotometry method • Conductometry: Titration of a mixture of weak acid and strong acid with strong alkali. • To determine the normality of citric acid in given fruit by titrating it against standard NaOH solution by conductometric method. • To determine λ_{∞} of strong electrolyte (NaCl or KCl) and to verify Onsager equation. • To estimate the amount of lead present in given solution of lead nitrate by conductometric titration with sodium sulphate. • To determine the relative strength of monochloro acetic acid and acetic acid conductometrically. • Viscosity: To determine the molecular weight of a high polymer by using solutions of different concentrations.
T.Y. B.Sc.	V	DSEC-II: CH-504: Inorganic Chemistry - I	<ul style="list-style-type: none"> • Explain electroneutrality principle and different types of pi bonding. • Able to explain Nephelauxetic effect towards covalent bonding. • Explain MOT of Octahedral complexes with sigma bonding.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> • Able to explain Charge Transfer Spectra. • Able to compare the different approaches to bonding in Coordination compounds. • To understand about inert and labile complexes and stability of complexes in aqueous solutions • Classification of reactions of coordination compounds • The basic mechanisms of ligand substitution reactions. • Substitution reactions of square planer complexes. • Tran's effect and applications of Trans effect • Stereochemistry of mechanism • Gain the knowledge of inorganic reaction mechanisms available in the literature to solve chemical problems. • To know position of -block elements in periodic table • The meaning of term f-block elements, Inner transition elements, lanthanides, actinides. • Electronic configuration of lanthanides and actinides. • Oxidation states of lanthanides and actinides and common oxidation states. • Separation lanthanides by modern methods. • To know the general electronic configuration & electronic configuration of elements. • To know trends in periodic properties of these elements w.r.t. size of atom and ions, reactivity, catalytic activity, oxidation state, complex formation ability, color, magnetic properties, non-stoichiometry, density, melting point, boiling point.
T.Y. B.Sc.	V	DSEC-II CH-505: Industrial Chemistry	<ul style="list-style-type: none"> • Importance of chemical industry, Meaning of the terms involved, Comparison between batch and continuous Concept of basic chemicals, • Their uses and manufacturing process • Importance of sugar industry, • Manufacture of direct • Consumption (plantation white) sugar with flow diagram, Cane juice extraction by various methods • Different types of soap products, Chemistry of soap, Raw materials required for soap manufacture\ • Dyes: introduction, Dye intermediates, Structural features of a dye; Classification of dyes, Synthesis, Structures, properties and applications of dyes
T.Y. B.Sc.	V	DSEC-II CH-506: Inorganic Chemistry Practical - I	<ul style="list-style-type: none"> • Gravimetric estimations: Gravimetric estimation of Fe as Fe_2O_3. • Gravimetric estimation of Ba as BaSO_4 using homogeneous precipitation method. • Gravimetric estimation of Nickel as Ni – DMG. • Analysis of sodium bicarbonate from mixture by thermal decomposition method. • Determination of water of crystallization by thermal decomposition • Analysis of Food/Pharmaceutical sample for ash and sulphated ash example-Aspirin.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> Inorganic preparation: Preparation of inorganic complexes and spot tests for metal ions and ligands: Preparation of hexamminenickel(II) chloride. Preparation of Potassium trioxalatoferrate (III). Preparation of Manganese (III) acetylacetonate. Preparation of tris(glycinato)nickelate(II), Preparation of Potassium dioxalatocuprate(II). Inorganic qualitative Analysis: Inorganic qualitative analysis: simple water soluble mixture, mixtures containing borates and mixtures containing phosphates. Limit test for iron, chloride and sulphate from pharmaceutical raw materials. Qualitative and confirmatory tests of inorganic toxicants of any four ions (Borate, copper, hypochlorite or nitrate or nitrite, Sb or Bi, Iodate, H₂O₂).
T.Y. B.Sc.	V	DSEC-III: CH-507: Organic Chemistry - I	<ul style="list-style-type: none"> Define and classify polynuclear and hetroonuclear aromatic hydrocarbons. Write the structure, synthesis of polynuclear and hetroonuclear aromatic hydrocarbons. Meaning of active methylene group Reactivity of methylene group Synthetic applications ethyl acetoacetate and malonic ester. What is rearrangement reaction? Different types of intermediate in rearrangement reactions 1,1 and 1,2 elimination E1, E2 and E1cB mechanism with evidences of these reactions 4 Understand stereochemistry by using models and learn reactivity of geometrical isomers
T.Y. B.Sc.	V	DSEC-III CH-508: Chemistry of Biomolecules	<ul style="list-style-type: none"> The student will understanding of Cell types, Difference between a bacterial cell, Plant cell and animal cell. Biological composition and Organization of cell membrane, structure and function of various cell organelles of plant and animal cell. Concepts of biomolecules, Bonds that link monomeric units to form. The student will understand the types of carbohydrates and their biochemical significance in living organisms, structure of carbohydrates and reactions of carbohydrates with Glucose as example. Properties of carbohydrates The student needs to know the types of lipids with examples, structure of lipids, properties of lipids Basic concepts of Endocrinology. Types of Endocrine glands and their hormones. Biochemical nature of hormones. Mechanism of action of lipophilic and hydrophilic hormones.
T.Y. B.Sc.	V	DSEC-III: CH-509: Organic Chemistry Practical-I	<ul style="list-style-type: none"> To develop skills required in chemistry such as the appropriate handling of apparatus and chemicals. The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> To expose the students to an extent of experimental techniques using modern instrumentation. The student will develop the ability to effectively communicate scientific information and research results in written and oral formats. Perform the quantitative chemical analysis of binary mixture, explain principles behind it. Separate, purify and analyse binary water insoluble mixture. Separate, purify and analyse binary water-soluble mixture. Understand the techniques involving drying and recrystallization by various method. Systematic working skill in laboratory will be imparted in student. Learn the basic principles of green and sustainable chemistry. Synthesis of various organic compounds through greener approach.
T.Y. B.Sc.	V	CH-510 (B) : Polymer Chemistry	<ul style="list-style-type: none"> Know the different analytical techniques. History of polymers, Difference between simple compounds and polymer, Names of polymers. Various ways of nomenclature. Difference between natural, synthetic, organic and inorganic polymers. Terms-Monomer, Polymer, Polymerization, Degree of polymerization, Functionality, Number average, Weight average molecular weight. Mechanisms of polymerization, Polymerization techniques. Uses & properties of polymers. Role of polymer industry in the economy. Advantages of polymers
T.Y. B.Sc.	V	CH-511 (A) : Environmental Chemistry	<ul style="list-style-type: none"> Importance and conservation of environment Importance of biogeochemical cycles Water resources Hydrological Cycle Organic and inorganic pollutants Water quality parameters
T.Y. B.Sc.	VI	DSEC-IV CH-601: Physical Chemistry-II	<ul style="list-style-type: none"> Electrochemical cells: Explanation of Daniell cell, Conventions to represent electrochemical cells Thermodynamic conditions of reversible cell, Explanations of reversible and irreversible electrochemical cell with suitable example, EMF of electrochemical cell and its measurement. Distinguish between crystalline and amorphous solids / anisotropic and isotropic solids. Explain the term crystallography and laws of crystallography. Weiss and Millers Indices, determination of Miller Indices Radioactivity, Types and properties of radiations: alpha,

Class	Semester	Course Title with Sub. Code	Outcome
			<p>beta and gamma</p> <ul style="list-style-type: none"> • Detection and Measurement of Radioactivity: Cloud chamber, Ionization Chamber, Geiger-Muller Counter, Scintillation Counter, Film Badges.
T.Y. B.Sc.	VI	DSEC-IV CH-602 : Physical Chemistry-III	<ul style="list-style-type: none"> • Meaning of the terms-Solution, electrolytes, nonelectrolytes and colligative properties, Lowering of vapour pressure of solvent in solution. • Factors affecting on solid state reactions • Rate laws for reactions in solid state • Applying rate laws for solid state reactions • Cohesive Energy of ionic crystals based on coulomb's law and Born Haber Cycle • Correspondence between energy levels in the atom and energy bands in solid • Band structure in solids – Na , Ca and diamond • History of polymers • Classification of polymers • Chemical bonding & Molecular forces in Polymer • Molecular weight of polymers • Practical significance of polymer molecular weights
T.Y. B.Sc.	VI	DSEC-IV: CH-603 : Physical Chemistry Practical-II	<ul style="list-style-type: none"> • To determine the PKa value of given monobasic weak acid by potentiometric titration • To determine the formal redox potential of Fe²⁺/ Fe³⁺ system potentiometrically • To determine the amount of NaCl in the given solution by potentiometric titration against silver nitrate • To determine the solubility product and solubility of AgCl potentiometrically using chemical cell • Estimate the amount of Cl⁻, Br⁻ and I⁻ in given unknown halide mixture by titrating it against standard AgNO₃ solution (mixture of any two ions) • To prepare standard 0.2 M Na₂HPO₄ and 0.1 M Citric acid solution, hence prepare four different buffer solutions using them. Determine the pH value of these and unknown solution • To determine the composition of Zinc ferrocyanide complex potentiometrically • To determine the standard electrode potentials of Cu and Ag electrodes and to determine the EMF of a concentration cell. • To determine the degree of hydrolysis of aniline hydrochloride. • To determine the dissociation constant of oxalic acid by pH-metric titration with strong base. • Determination of Pka of given weak acid by pH metry titration with strong base • To determine the acid and base dissociation constant of an amino acid and hence the isoelectric point of an acid. • pH metric titration of strong acid against strong base by

Class	Semester	Course Title with Sub. Code	Outcome
			<p>pH measurement and hence determine the concentration and strength of strong acid.</p> <ul style="list-style-type: none"> To determine plateau voltage of the given G M counter. To determine the resolving time of GM counter. To determine Emax of beta particle.
T.Y. B.Sc.	VI	DSEC-V: CH-604 : Inorganic Chemistry -II	<ul style="list-style-type: none"> To understand M-C bond and to define organometallic compounds To define organometallic chemistry To understand the multiple bonding due to CO ligand To know methods of synthesis of binary metal carbonyls Understand the phenomenon of catalysis, its basic principles and terminologies Define and differentiate homogeneous and heterogeneous catalysis Give examples and brief account of homogeneous catalyst Understand the essential properties of homogeneous catalysts-Give the catalytic reactions Identify the biological role of inorganic ions & compounds. Know the abundance of elements in living system and earth crust Give the classification of metals as enzymatic and non-enzymatic Understand the role of metals in non-enzymatic processes.
T.Y.B.Sc	VI	DSEC-V: CH-605: Inorganic Chemistry -III	<ul style="list-style-type: none"> Student will learn the concept of acid base and their theories. They will also come to know different properties of acids and bases. Strength of various types acids. How acid and base strengths get affected in non-aqueous solvents. Draw the simple cubic, BCC and FCC structures. Identify the C.N. of an ion in ionic solid. Identify the type of void. Know the effect of radius ratio in determining the crystal structure. Be able to define Pauling's univalent radius and crystal radius. Different Zeolite Framework Types and their classification Zeolite synthesis and their structure Application of zeolites Various methods of nanoparticle synthesis Stabilization of Nanoparticles in solution Properties and Application of Nanoparticles Know about carbon nanotube and its application
T.Y.B.Sc	VI	DSEC-V: CH-606: Inorganic Chemistry Practical-II	<ul style="list-style-type: none"> Analysis of Phosphate (PO_4^{3-}) from Fertilizer. Analysis of Iodine from Iodized salt. Strength of medicinal H_2O_2. Analysis of Calcium from milk powder.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> • Analysis of Cu from Cu-Fungicide. • Estimation of Na by flame photometry by calibration curve method. • Estimation of Na by flame photometry by regression method. • Estimation of K by flame photometry by calibration curve method. • Estimation of K by flame photometry by regression method. • Purification of water using cation/anion exchange resin and analysis by qualitative analysis /conductometry. • Synthesis of Silver nanoparticles. • Synthesis of ZnO nanoparticles. • Verification of periodic trends using solubility of alkaline earth metal hydroxides Ca(OH)_2, Mg(OH)_2, Cr(OH)_2, Ba(OH)_2. • Synthesis of amine complexes of Ni(II) and its ligand exchange reaction (bidentate ligands like acac, DMG, Glycine) by substitution method. OR Determination of the Metal to ligand ratio (M : L) in complexes. • Solvent free microwave assisted one pot synthesis of phthalocynin copper (II) complex. OR Fenton reaction: Degradation of H_2O_2 using Fe catalyst.
T.Y.B.Sc	VI	DSEC-VI: CH-607: Organic Chemistry-II	<ul style="list-style-type: none"> • Students will learn the interaction of radiations with matter. They will understand different regions of electromagnetic radiations. They will know different wave parameters • Students will learn the principle of mass spectroscopy, its instrumentation and nature of mass spectrum. • Students will understand the principle of UV spectroscopy and the nature of UV spectrum. • They will learn types of electronic excitations. • Students will understand the principle of NMR spectroscopy and will understand various terms used in NMR spectroscopy. They will learn measurement of chemical shift and coupling constants. • Students will be able to determine the structure of simple organic compounds on the basis of • Spectral data such as λ max values, IR frequencies, chemical shift (δ values)
T.Y.B.Sc	VI	DSEC-VI: CH-608: Organic Chemistry-III	<ul style="list-style-type: none"> • Study the Disconnection, Synthons, Synthetic equivalence, FGI, TM, One group disconnection, Retrosynthesis. • To study Chemistry of reactive intermediates (carbocations, carbanions, free radicals, carbenes, nitrenes, benzyne) • Wolff rearrangement (Step up), • Hofmann rearrangement (Step down), • Simmons-Smith reaction, • Michael reaction, • Wittig reaction and McMurry reaction, • Diels-Alder reaction,

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> Functional group interconversions and structural problems using chemical reactions. To understand the Oxidation ,reduction and oxidizing , reducing agents
T. Y. B.Sc	VI	DSEC-VI: CH-609: Organic Chemistry Practical-II	<ul style="list-style-type: none"> Explain “fingerprint region” of an infrared spectrum can used in the identification of an unknown compound. Identify the functional group or groups present in a compound. Identify the broad regions of the infrared spectrum in which occur absorptions caused by N–H, C–H, and O–H, C≡C and C≡N, C=O, C=N, and C=C. Understand use NMR spectra to determine the structures of compounds. Interpret integration of NMR spectra Calculate coupling constants from ¹H NMR spectra. Interpret elemental analysis technique. Practical knowledge of handling chemicals. Achieve the practical skills required to estimations of glucose and glycine. Achieve the practical skills required to Saponification value of oil. Determine the molecular weight of given tribasic acids Apply the principles of extraction Understand the equipment for extraction Defines the basic parameter of chromatography Explain the processes of a chromatography analysis Describes the types and materials of column. Explains the types of mobile phase and elution.
T. Y. B.Sc	VI	DSEC-VI: CH-610 (A): Chemistry of Soil and Agrochemicals	<ul style="list-style-type: none"> To understand various components of soil and soil properties and their impact on plant growth, the classification of the soil. Explores the problems and potentials of soil and decide the most appropriate treatment for land use. The Reclamation and management of soil physical and chemical constraints. Useful in making decisions on nutrient dose, choice of fertilizers and method of application etc. practiced in crop production. Advanced analytical and instrumentation methods in the estimation of soil. Various Nutrient management concepts and nutrient use efficiencies of major and micronutrients and enhancement techniques. Proper understanding of chemistry of pesticides will be inculcated among the students, different pesticides, their nature and, mode of action and their fate in soil so as to monitor their effect on the environment
T. Y. B.Sc	VI	DSEC-VI: CH-	<ul style="list-style-type: none"> Define basic terms in solvent extraction, basics of

Class	Semester	Course Title with Sub. Code	Outcome
		611(A): Analytical Chemistry-II	<p>chromatography, HPLC, GC, and AAS and AES.</p> <ul style="list-style-type: none"> • The solvent extraction, aqueous and organic phase, distribution ratio and coefficient, percent extraction, ion association complex, theoretical plate, HETP, retention time, selectivity, resolution, stationary phase, normal and reverse phase, ion exchange, column efficiency, carrier gas, split and spitless injection, packed column, tubular column. • Atomic absorption and emission spectroscopy, electronic excitation in atoms, nebulization, atomization, reduction of metal ions in flame, absorbance by atoms in flame, flame atomizers, furnace atomizers, interference in AES and FES, HCL, hydride generator, etc. • Identify important parameters in analytical processes or estimations. • The reagent concentration for particular analysis, reagent for particular analysis, reaction condition to convert analyte into measurable form, wavelength selection in HPLC with spectrophotometric and fluorometric detector, solvent or carrier gas in HPLC and GC, choice method for the sample preparation in atomic spectroscopic methods, choice of filter and HCL in atomic spectroscopic methods, etc. • Explain different principles involved in the analyses using solvent extraction, basics of instrumental chromatography, HPLC, GC, and atomic spectroscopic techniques. • Perform quantitative calculations depending upon equations students has studied in the theory. Furthermore, student should able to solve problems on the basis of theory. • Differentiate / distinguish / compare among the different analytical terms, process and analytical methods. • Demonstrate / explain theoretical principles with help of practical and design analytical procedure for given sample.

Course Outcomes: B.Sc. (Physics)

Class	Semester	Course Title with Sub. Code	Outcome
F.Y. B.Sc.	I	PHY 111 - Mechanics and properties of matter	<ul style="list-style-type: none">• Relative motion. Inertial and non-inertial reference frames.• Newton's laws of motion and its real-life applications.• Motion and its types with examples.• Define and calculate Speed, Velocity, and Acceleration.• Energy, conservation of Energy. Define kinetic and Potential Energy.• Conservative and non-conservative force with examples.• Concept of viscous force, viscosity. Bernoulli's equations and its applications.• Different properties of matter such as Surface Tension, Elasticity.• Factors affecting surface tension and different methods for determining surface tension.• Applications of Surface Tension.• Concept of Stress, Strain and different elastic Moduli• Using elasticity determination of Young's Modulus and Modulus of Rigidity.• Understanding of Poisson's Ratio.• Relation Between three elastic moduli.
F.Y. B.Sc.	I	PHY 112 Physics Principles and Applications	<ul style="list-style-type: none">• To understand the general structure of atom, Spectrum of Hydrogen atom• To understand the atomic excitation and LASER principles• To understand the bonding mechanism and its different types• To demonstrate and understanding electro-magnetic waves and its spectrum• Understand the types and sources of electromagnetic waves and applications• To demonstrate quantitative problems solving skills in all the topics covered
F.Y. B.Sc.	I	PHY 113 Physics Laboratory	A practical physics course enables students to do experiments on the fundamental laws and principles, and

Class	Semester	Course Title with Sub. Code	Outcome
		1A	<p>gain experience of using a variety of measuring instruments. Practical work enhances basic learning skills.</p> <ul style="list-style-type: none"> • Students get skills on handling measuring instrument and finding the percentage error in measurement • Enables students to understand Mechanics through experiments • Enables students to understand optics through performing experiments and skills get developed to handle optical instrument's
F.Y. B.Sc.	II	PHY 121 Heat and Thermodynamics	<ul style="list-style-type: none"> • To understand the basic concepts of thermodynamics. • To be able to state First Law of thermodynamics and to define heat, work and thermal efficiency. • To calculate changes in Enthalpy, Entropy and Internal Energy. • To explain the classification of external and internal combustion engine and sketch the diagram of Processes involved in spark ignition and compression ignition. • Students will be able to read a thermometer. • Students will become familiar with and will be able to convert different temperature scales
F.Y. B.Sc.	II	PHY 122 Electricity and Magnetism	<ul style="list-style-type: none"> • To understand the concepts of electric field, electric force and electric potential for stationary charge • Able to calculate electrostatic field and potential of charge distributions using Coulombs Law and Gauss law • To understand the dielectric phenomenon and effect of electric field on dielectric. • To study magnetic field for steady current using Biot-Savarts and Ampere circuit Laws. • To understand Magnetic material and its properties • To demonstrate quantitative problems solving skills in all the topics covered
F.Y. B.Sc.	II	PHY 123 Physics Laboratory 1B	<p>A practical physics course enables students to do experiments on the fundamental laws and principles, and gain experience of using a variety of measuring instruments. Practical work enhances basic learning skills.</p> <ul style="list-style-type: none"> • Students will understand the concepts based on heat and thermodynamics. • Students will understand the concepts based on Electricity and magnetism through various experiments.
S.Y. B.Sc.	III	PHY-231 Mathematical	<ul style="list-style-type: none"> • Understand the complex algebra useful in physics courses. • Understand the concept of partial differentiation.

Class	Semester	Course Title with Sub. Code	Outcome
		Methods in Physics-I	<ul style="list-style-type: none"> • Understand the role of partial differential equations in physics. • Understand vector algebra useful in mathematics and physics. • Understand the concept of singular points of differential equations.
S.Y. B.Sc.	III	PHY-232(A) Electronics-I	<ul style="list-style-type: none"> • Apply different theorems and laws to electrical circuits. • Understand the relations in electricity. • Understand the parameters, characteristics and working of transistors. • Understand the functions of operational amplifiers. • Design circuits using transistors and applications of operational amplifiers. • Understand the Boolean algebra and logic circuits.
S.Y. B.Sc.	III	PHY-233 Physics Laboratory-2A	<ul style="list-style-type: none"> • Use various instruments and equipment. • Design experiments to test a hypothesis and/or determine the value of an unknown quantity. • Investigate the theoretical background of an experiment. • Setup experimental equipment to implement an experimental approach. • Analyze the data, plot appropriate graphs and reach conclusions from data analysis. • Work in a group to plan, implement and report on a project/experiment. • Keep a well-maintained and instructive laboratory logbook.
S.Y. B.Sc.	IV	PHY-241 Oscillations, Waves and Sound	<ul style="list-style-type: none"> • To study underlying principles of oscillations and its scope in development. • To understand and solve the equations / graphical representations of motion for simple harmonic, damped, forced oscillators and waves. • To explain oscillations in terms of energy exchange with various practical applications. • To solve numerical problems related to undamped, damped, forced oscillations and superposition of oscillations. • To study characteristics of sound, decibel scales and applications.
S.Y. B.Sc.	IV	PHY-242 Optics	<ul style="list-style-type: none"> • Acquire the basic concept of wave optics. • Describe how light can constructively and destructively interfere. • Explain why a light beam spread out after passing through an aperture • Summarize the polarization characteristics of electromagnetic wave • Understand the operation of many modern optical

Class	Semester	Course Title with Sub. Code	Outcome
			<p>devices that utilize wave optics</p> <ul style="list-style-type: none"> • Understand optical phenomenon such polarization, diffraction and interference in terms of the wave model • Analyze simple example of interference and diffraction.
S.Y. B.Sc.	IV	PHY-243 Physics Laboratory-2B	<ul style="list-style-type: none"> • Use various instruments and equipment. • Design experiments to test a hypothesis and/or determine the value of an unknown quantity. • Investigate the theoretical background of an experiment. • Setup experimental equipment to implement an experimental approach. • Analyze the data, plot appropriate graphs and reach conclusions from data analysis. • Work in a group to plan, implement and report on a project/experiment. • Keep a well-maintained and instructive laboratory logbook.
T.Y. B.Sc.		PHY-351: Mathematical methods in physics-II	<ul style="list-style-type: none"> • Define Cartesian, spherical and cylindrical co-ordinates, transformation and a general curvilinear co-ordinates system: Coordinate surface co-ordinate lineslength surfaces and volume elements in curvilinear co-ordinates system. • Generate equation for Orthogonal curvilinear co-ordinate system, gradient, divergence, Laplacian and curl, special case for gradient, divergence and curl in Cartesian, spherical polar and cylindrical co-ordinates system, • Introduction and applications, Newtonian relativity, Galilean Transformation equation. Michelson – Morley experiment • Postulate of special theory of relativity, Lorentz transformation, Kinematic effects of, Lorentz transformation. Define Length contraction, proper time • Convert commonly occurring partial differential equations in physics into ODE's Method of separation of variables in Cartesian, Spherical polar and cylindrical co-ordinates system (2-dimensional Laplace's equation, 1-D wave equation • Illustrate the problems on Frobenius method of series solution and to differentiate • Point of expansion of given differential equations. • Evaluate & plot Legendre polynomials, Hermit polynomials, Bessel function of first kind. • List the most important special functions in physics and to solve different properties related to special

Class	Semester	Course Title with Sub. Code	Outcome
T.Y. B.Sc.	III	PHY-352: Electrodynamics	<p>functions.</p> <ul style="list-style-type: none"> • Define the Biot-savart law, Amperes law, Coulombs law, Electric field, Electric susceptibility, Magnetic field & Faradays law. • Explain method of electrical images, equation of continuity, Magnetic vector potential, B.H curve, Maxwell's equation & wave equations. • Solve numerical problem on coulombs force, magnetic induction, magnetic permeability and induced voltage, magnitude of electric & magnetic vectors. • Determine work done by charges, total charge, force on the wire in different symmetry. • Summarize pointing vector, polarization, reflection & refraction. • Apply Biot-Savart law in different symmetry problem • List the applications of Amperes law, Biot-Savart law, and Poynting theorem • Elaborate magnetic properties of the material.
T.Y. B.Sc.	III	PHY-353: Classical Mechanics:	<ul style="list-style-type: none"> • Solve advanced problems involving the dynamic motion of classical mechanical systems with an intermediate knowledge of Newton's laws of motion • Apply the concept of center of mass and mechanics of system of particles and conservation of energy, linear and angular momentum to solve dynamics problems • Demonstrate an intermediate knowledge of central-force motion and the concept of converting two body problems to single body problem and apply advanced methods to complex central-force motion problems. • Demonstrate an intermediate knowledge of concept of laboratory frame and center of mass frame and their use to calculate results of scattering experiments • Apply the concept scattering to get important information regarding the nature of interaction between atomic and subatomic particles through experiments • Derive Lagrange and Hamilton's equations, and represent the equations of motion for simple mechanical systems such as: the Atwood's machine, Simple pendulum using these formulations of classical mechanics • Acquire working knowledge of the methods of Hamiltonian Dynamics and compute the Hamilton equations of motion for mechanical systems

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> • Use calculus of variations to find the Euler-Lagrange equations and canonical transformations to find the constants of motion according to the Hamilton Jacobi theory. • Use Poisson brackets to find derivatives in phase space.
T.Y. B.Sc.	III	PHY-354: Atomic and Molecular Physics	<ul style="list-style-type: none"> • Derive the formulae for total energy of an atom so that energy level diagram can be drawn and also able to obtain the expression for spin orbit interaction energy. • State laws, postulates in atomic and molecular Physics and able to compare various models of atomic structure. • Calculate quantum state of electrons in an atom, spectral notation and electronic configuration of atom • Obtain formulae for Zeeman shift, wavelength of emitted X-ray s, Raman shift, rotational and vibrational energy for diatomic molecule and apply it. • Explain origin of line spectra and able to compare continuous spectra, characteristic spectra and can differentiate between rotational, vibrational, and electronic spectra. • Explain application of Duane and Hunt's rule, Moseley's law and its importance, applications of X-rays, Raman effect and Auger effect. • Draw and explain X-ray spectra, spectrum with and without magnetic field • (Zeeman effect), Raman spectra and molecular spectra using quantum treatment • Explain experimental arrangement to produce X-ray, to observe Raman effect and Zeeman effect.
T.Y. B.Sc.	III	PHY-355: Computational Physics	<ul style="list-style-type: none"> • Define types of programming languages and their uses; • Gain basic competency with a widely used C-language for both general and scientific programming; • Define operators and expression in C-programming and navigate commands; • Explain control statements and loops as well as capable of writing C-program to solve problems • Describe arrays and pointers and apply them in C program • Critically present different numerical methods to solve different types of physical and technical problems; • Implement numerical algorithms into C-program and

Class	Semester	Course Title with Sub. Code	Outcome
			visualize the results of the computations. <ul style="list-style-type: none"> • Demonstrate the ability to estimate the errors in the use of numerical methods.
T.Y. B.Sc.	III	PHY-356: Elective-I Elements of Materials science	<ul style="list-style-type: none"> • Define and outline the rules of solubility, deformation in metals, basic concepts in phase diagram, molecular phases and the concept of smart materials. • Explain the imperfections in solids, mechanism of plastic deformation by slip, properties of ceramic materials, the importance and objective of phase diagram • Calculate and solve problems on stress and strain of materials, CRSS of single-phase metals, weight in percentage of compositions using lever rule. • List the defects in solids, diffusion mechanisms and types of phase diagram. • Classify between elastic deformation and plastic deformation, linear polymers and cross-linked polymers • Derive the CRSS of metals and the lever rule for phase diagrams. • Discuss the types of smart materials, properties of smart materials and their applications • Summarize the concept of polymers and the process of polymerization.
T.Y. B.Sc.	IV	PHY-357: Physics Laboratory-3A	<ul style="list-style-type: none"> • Describe the underlying theory of experiments in the course. • Perform derivations of theoretical models of relevance for the experiments in the course. • Follow instructions to perform laboratory experiments in Optics, Thermodynamics, Mechanics, Modern Physics, Electronics and Electromagnetics. • Document their results, using correct procedures and protocols. • Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant. • Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally or in a written laboratory report. • Calculate permissible standard error in any physics experiment • Derive conclusions from the analysis of own data. • Assess the language used to describe physics experiments and how it can alter perceptions of the method and results.

Class	Semester	Course Title with Sub. Code	Outcome
T.Y. B.Sc.	IV	PHY-358: Physics Laboratory-3B	<ul style="list-style-type: none"> • Describe the underlying theory of experiments in the course. • Perform derivations of theoretical models of relevance for the experiments in the course. • Follow instructions to perform laboratory experiments in Optics, Thermodynamics, Mechanics, Modern Physics, Electronics and Electromagnetics. • Document their results, using correct procedures and protocols. • Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant. • Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally or in a written laboratory report. • Calculate permissible standard error in any physics experiment • Derive conclusions from the analysis of own data. • Assess the language used to describe physics experiments and how it can alter perceptions of the method and results.
T.Y. B.Sc.	IV	PHY-359: Physics Project-I	<ul style="list-style-type: none"> • Design and test hypothesis • Describe the underlying theory of experiments in the course. • Perform derivations of theoretical models of relevance for the experiments in the course. • Document their results, using correct procedures and protocols. • Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant.
T.Y. B.Sc.	IV	PHY-3510(H): Energy Studies	<ul style="list-style-type: none"> • Students become capable of conducting energy audits and give consultancy in that field. • Students can design different types of solar heaters for small domestic as well as large scale community level applications • Students acquire skills to implement solar P-V systems at domestic levels as well as for office premises and educational institutions. Students become able to start their own enterprise in net metering. • Students get ideas and hence become self-employed in the field of design, production, commissioning and implementation of bio-mass energy sources, bio-gas plants, gasifiers, wind mills, hybrid systems etc. • Students can go for research in the fields of super-

Class	Semester	Course Title with Sub. Code	Outcome
			<p>capacitors, battery technologies, fuel cells and material synthesis for implementation of these technologies.</p> <ul style="list-style-type: none"> • Students become successful entrepreneurs in the energy field. Students strive to make the regions where they live and work self-sufficient in generating and fulfilling their own energy needs using different energy solutions.
T.Y. B.Sc.	IV	PHY-3511(K): Physics Workshop Skill	<ul style="list-style-type: none"> • Students understand the comparative aspects, advantages and disadvantages of various sources of energy. They understand the facts and myths regarding the energy sources. • Students learn the basic principles involved and technologies developed in the uses of solar energy, biomass energy, wind energy, fuel cells. • Students understand the challenges and opportunities in conversion of energy from one form to another, generation of electricity and mechanical work using different energy sources. • Students get acquainted with challenges and recent trends in energy storage devices and they learn more about super-capacitors and batteries, electrical vehicles. They can imagine about future road maps in the fields of energy conversion and storage technologies. • Students become capable of conducting energy audits and give consultancy in that field. • Students can design different types of solar heaters for small domestic as well as large scale community level applications. • Students acquire skills to implement solar P-V systems at domestic levels as well as for office premises and educational institutions. Students become able to start their own enterprise in net metering. • Students get ideas and hence become self-employed in the field of design, production, commissioning and implementation of bio-mass energy sources, bio-gas plants, gasifiers, wind mills, hybrid systems etc. • Students can go for research in the fields of super-capacitors, battery technologies, fuel cells and material synthesis for implementation of these technologies. • Students become successful entrepreneurs in the energy field. Students strive to make the regions where they live and work self-sufficient in generating and fulfilling their own energy needs using different energy solutions.

Class	Semester	Course Title with Sub. Code	Outcome
T.Y. B.Sc.	VI	PHY-361: Solid state physics.	<ul style="list-style-type: none"> Define crystal structure to develop it in 2D as well as 3D and to determine Indices for 'Directions' and 'Planes' in a crystal structure. Give original examples of crystal structures and to analyze them with packing fraction, coordination number, number of atoms per unit cell etc. Derive Bragg Diffraction condition in direct lattice and to relate it in reciprocal lattice using Ewald construction. Classify the crystal structure by XRD diffraction and to simplify formula for inter- planer distance. Illustrate various experimental techniques for characterization of material. Apply free electron theory to restate thermal and electrical properties Explain superconductivity and Meissner-effect Define magnetic properties of material and to derive susceptibility formula for different magnetic materials using Langevein theory.
T.Y. B.Sc.	VI	PHY-362: Quantum Mechanics	<ul style="list-style-type: none"> Outline the historical aspects of development of quantum mechanics; Explain the differences between classical and quantum mechanics; Describe matter waves, wave function and uncertainty principle; Describe Schrodinger's equation and its steady state form; Solve Schrodinger's steady state equation for simple potentials to obtain Eigen functions and Eigen values Apply Schrodinger's steady state equation for spherically symmetric potentials obtain Eigen functions and eigenvalues; Interpret quantum numbers in atomic system; Discuss operator algebra in quantum mechanics.
T.Y. B.Sc.	VI	PHY-363: Thermodynamics and Statistical Physics	<ul style="list-style-type: none"> Describe transport phenomena and compute coefficient of thermal conductivity, viscosity and diffusion in terms of mean free path Define and discuss the concepts and roles of thermodynamic functions from the view point of statistical mechanics Derive Binomial distribution and Gaussian probability distribution using random walk problem and calculate mean values for a statistical system Discuss the concepts of microstate and macro state, basic postulates and behavior of density of states for model system and calculate the number of microstates for different statistical systems

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> • Differentiate thermal, mechanical and general interaction between statistical system • Derive and compare Maxwell Boltzmann, Bose-Einstein and Fermi-Dirac distributions; state where they are applicable and explain the connection between classical • Derive probability distribution formula for micro canonical, canonical ensemble and calculate mean values in canonical ensemble • Discuss applications for canonical ensemble
T.Y. B.Sc.	VI	PHY-364: Nuclear Physics	<ul style="list-style-type: none"> • Define threshold voltage, dead time and recovery time in GM counter, threshold energy, nuclear fission, nuclear fusion, critical size, critical mass. • Determine the basic properties of nucleus • Classify nuclear radiations, elementary particles and nuclear states, nuclear detectors. • Compose baryons and mesons with Quark model. • Derive expression for energy of ions and frequency of RF signal in cyclotron, Q- value equation, threshold energy, and decay constant. • Estimate binding energy from fission • Justify nuclear reactions using conservation laws • Explain the different processes by which energetic particles interact with matter, kinematics of various reactors and decay processes
T.Y. B.Sc.	VI	PHY—366: Elective- II	<ul style="list-style-type: none"> • Explain the interaction of radiation with matter, Quantum behavior of light, thermal equilibrium and population inversion • Illustrate the absorption, spontaneous and stimulated emission with appropriate diagrams. • Derive the Einstein's relation, conditions for largestimulated emission and light amplification. • Distinguish between ordinary light and laser light • Define the characteristics of laser light. • Classify between lifetime broadening, collision and Doppler broadening. • List the types of lasers • Discuss the applications of lasers in various fields.
		PHY-366 (R): Lasers	<ul style="list-style-type: none"> • Explain the interaction of radiation with matter, Quantum behavior of light, thermal equilibrium and population inversion • Illustrate the absorption, spontaneous and stimulated emission with appropriate diagrams. • Derive the Einstein's relation, conditions for largestimulated emission and light amplification.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> • Distinguish between ordinary light and laser light • Define the characteristics of laser light. • Classify between lifetime broadening, collision and Doppler broadening. • List the types of lasers • Discuss the applications of lasers in various fields.
		Physics Practical-I PHY-367: Physics Laboratory-4A	<ul style="list-style-type: none"> • Describe the underlying theory of experiments in the course. • Perform derivations of theoretical models of relevance for the experiments in the course • Follow instructions to perform laboratory experiments in Optics, Thermodynamics, Mechanics, Modern Physics, Electronics and Electromagnetics. • Document their results, using correct procedures and protocols. • Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant. • Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally or in a written laboratory report. • Calculate permissible standard error in any physics experiment • Derive conclusions from the analysis of own data. Assess the language used to describe physics experiments and how it can alter perceptions of the method and results.
		Physics Practical-II PHY-368: Physics Laboratory-4B	<ul style="list-style-type: none"> • Describe the underlying theory of experiments in the course. • Perform derivations of theoretical models of relevance for the experiments in the course. • Follow instructions to perform laboratory experiments in Optics, Thermodynamics, Mechanics, Modern Physics, Electronics and Electromagnetics • Document their results, using correct procedures and protocols • Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant. • Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally or in a written laboratory report. • Calculate permissible standard error in any physics experiment • Derive conclusions from the analysis of own data.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> Assess the language used to describe physics experiments and how it can alter perceptions of the method and results.
		Physics Practical-III: Project PHY-369: Physics Project-II	<ul style="list-style-type: none"> design and test hypothesis Describe the underlying theory of experiments in the course. Perform derivations of theoretical models of relevance for the experiments in the course. Document their results, using correct procedures and protocols. Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant.
		PHY-3610: Skill Enhancement Course -III PHY-3610(H): Solar PV System: Installation, Repairing and Maintenance	<ul style="list-style-type: none"> In this skill-oriented course, student will study basics of solar photovoltaic (PV) cells, modules, and system components. Design and sizing of off-grid PV system for homes, apartments as well as commercial offices. Understanding energy conversion from sunlight to electricity, and working with solar conversion equipment. This Course will hand on experience needed to become self-employed. Learn basics of light conversion in electricity. Hands on training will motivate to use Solar PV system. Become entrepreneur / self-employed Analyzed of MSEB electricity bill and design and sizing of off-grid PV system Participants will learn about solar PV module and batteries used in solar PV plant.
		PHY-3611: Skill Enhancement Course -IV PHY-3611(Z): Instrumentation for Agriculture	<ul style="list-style-type: none"> Get knowledge of sensors used in agriculture field Learn continuous and batch process Learn greenhouse automation schemes Learn Instrumentation in Irrigation Able to test soil and water parameter Able to develop their own juice extract plant Able to developed their own green house

Course Outcomes: B.Sc. (Mathematics)

Class	Semester	Course Title with Sub. Code	Outcome
F.Y. B.Sc.	I	MT-111 Algebra	<ul style="list-style-type: none"> Learn to find graphs, roots and primes integer using maxima software. Introduction to complex analysis.
		MT-112 Calculus - I	<ul style="list-style-type: none"> Introduction to sequence and series. Learn to check function is continuous understand the consequences of the intermediate value theorem for continuous functions.
		MT-113 Mathematics Practical	<ul style="list-style-type: none"> Learn Maxima software. Problem solve on algebra and calculus by using maxima software. Knowledge of application of mathematics
F.Y. B.Sc.	II	MT-121 Analytical Geometry	<ul style="list-style-type: none"> Finding equation in various form of line, circle, ellipse, sphere, cones etc. Give the knowledge of geometry using maxima software.
		MT-122 Calculus - II	<ul style="list-style-type: none"> Student will be to understand differentiation and fundamental theorem in differentiation and various rules. Introduction to Ordinary Differential Equation.
		MT-123 Mathematics Practical	<ul style="list-style-type: none"> Learn Maxima software. Problem solve on analytic geometry and calculus by using maxima software. Problem solving on geometry and calculus.
S.Y. B.Sc.	I	MT -231 Calculus of several variables	<ul style="list-style-type: none"> Solve problems involving tangent planes and normal lines Determine the extrema of functions of several variables Use the Lagrange multiplier method to find extrema of functions with constraints.
		MT 232(A) Numerical Methods and its Applications	<ul style="list-style-type: none"> Using appropriate numerical methods determine approximate solution of ODE and system of linear equation. Compare different methods in numerical analysis w.r.t accuracy and efficiency of solution.
		MT232(B) Graph Theory	<ul style="list-style-type: none"> Solve problems on Definition and some properties of trees, Distance and Centre in a tree, Definitions of Rooted and Binary trees, Spanning trees, Minimal Spanning trees, Directed graphs, some types of digraphs.
		MT233 Mathematics Practical	<ul style="list-style-type: none"> Problem solving on calculus of several variable and Graph Theory and Numerical Methods and Its Applications using Maxima Software Introduction to application of mathematics in real life.
S.Y. B.Sc.	II	MT 241 Linear Algebra	<ul style="list-style-type: none"> Understand the concepts of vector spaces, subspaces, bases, dimensions and their properties.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> Relate matrices and linear transformations; compute Eigen values and Eigen vectors of linear transformations. Linear properties of inner product spaces and determine orthogonality in inner product spaces
		MT 242(A) Vector Calculus II	<ul style="list-style-type: none"> Understand the basic of surfaces in space. Able to apply the basic concepts of partial derivatives. Understand and able to apply the concepts of vector function, vector field, scalar field, gradient, divergence and curl.
		MT242(B) Dynamical Systems	<ul style="list-style-type: none"> Will have information about the concepts related to dynamic systems Be able to apply their knowledge about dynamic systems in a simulation environment and develop system analysis capability in the framework of linear and time-invariant systems
		MT243 Practical	<ul style="list-style-type: none"> Problem solving on Linear Algebra and Dynamical Systems and Vector Calculus using Maxima Software.
T.Y. B.Sc.	III	MT 331 : Metric Spaces	<ul style="list-style-type: none"> Deal with various examples of metric spaces. Have some familiarity with continuous maps. Work with compact sets in Euclidean space.
T.Y. B.Sc.	III	MT 332 : Real Analysis-I	<ul style="list-style-type: none"> Explain the completeness of a system of real numbers: a least upper bound, a greatest lower bound. Elaborate on the topological concepts of the real numbers: open sets, closed sets, accumulation points, closure, open covers, compact sets. Define and utilize the following concepts: sequence, subsequence, monotone sequence, Cauchy sequence.
T.Y. B.Sc.	III	MT 333 : Problem Course on MT 331 and MT	<ul style="list-style-type: none"> Appreciate how abstract ideas and rigorous methods in mathematical analysis can be applied to important practical problems.
T.Y. B.Sc.	III	332	<ul style="list-style-type: none"> Problem solving on metric space and connected and contactless.
T.Y. B.Sc.	III	MT 334 : Group Theory	<ul style="list-style-type: none"> Learn about the fundamental concepts of groups, subgroups, normal subgroups, isomorphism, cyclic and permutation groups.
T.Y. B.Sc.	III	MT 335 : Ordinary Differential Equations	<ul style="list-style-type: none"> Recognize and solve a homogeneous differential equation. Recognize and solve an exact differential equation. Recognize and solve a linear differential equation by use of an integrating factor. Make a change of variables to reduce a differential equation to a known form. Find particular solutions to initial value problems
T.Y. B.Sc.	III	MT 336 : Problem Course on MT 334 and MT 334	<ul style="list-style-type: none"> Demonstrate by solving various problem based on Symmetry using group theory Application of ODE.
T.Y. B.Sc.	III	MT 337:A. Operations Research	<ul style="list-style-type: none"> Students learn to calculate optimal solution of models through graphical and iterative methods. Students study transportation and assignment models and methods to solve them. This helps them to get optimum solutions within the

Class	Semester	Course Title with Sub. Code	Outcome
			given constraints to problems arising in industry.
T.Y. B.Sc.	III	MT 337:D. Lattice Theory	<ul style="list-style-type: none"> to understand lattices as algebraic structures homomorphisms between lattices and Boolean Algebra polynomials, switching circuits
T.Y. B.Sc.	III	MT 338: Practical based on papers selected from 337A to 337F	<ul style="list-style-type: none"> Develop a report that describes the model and the solving technique, analyze the results and propose recommendations in language understandable to the decision-making processes in Management Engineering
T.Y. B.Sc.	IV	MT 341: Complex Analysis	<ul style="list-style-type: none"> Compute sums, products, quotients, conjugate, modulus, and argument of complex numbers · Define and analyze limits and continuity for complex functions as well as consequences of continuity · Conceive the concepts of analytic functions and will be familiar with the elementary complex functions and their properties · Determine whether a given function is differentiable, and if so find its derivative. Applies the theory into application of the power series expansion of analytic functions
T.Y. B.Sc.	IV	MT 342: Real Analysis-II	<ul style="list-style-type: none"> Illustrate the effect of uniform convergence on the limit function with respect to continuity, differentiability, and integrability. Study improper integration using Riemann integration
T.Y. B.Sc.	IV	MT 343: Problem Course on MT 341 and MT 342	<ul style="list-style-type: none"> Applies the theory into application of the power series expansion of analytic functions · Understand the basic methods of complex integration and its application in contour integration. To analyze sequences and series of analytic functions and types of convergence, · Evaluate complex contour integrals directly and by the fundamental theorem, apply the Cauchy integral theorem in its various versions, and the Cauchy integral formula
T.Y. B.Sc.	IV	MT 344: Ring Theory	<ul style="list-style-type: none"> Study of various integral domains in ring. Introduction to Ring.
T.Y. B.Sc.	IV	MT 345: Partial Differential Equations	<ul style="list-style-type: none"> Apply specific methodologies, techniques and resources to conduct research and produce innovative result in the area of specialization. Extract information form partial derivative models in order to interpret reality. Identify real phenomena as models of partial derivative equations.
T.Y. B.Sc.	IV	MT 346: Problem Course on MT 344 and MT 345	<ul style="list-style-type: none"> Problem on ring and PDE. Application of PDE in real life. Various structural study of ring.
T.Y. B.Sc.	IV	MT347F : Computational Geometry	<ul style="list-style-type: none"> Students learn the representation of objects in 2D and 3D in the form of matrices To study the transformations like reflection, rotation, scaling, shearing, translation of objects in 2D and 3D and their geometrical significance. Students learn to generate plane curves by using parametric equation

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> All the concepts help students to learn graphic display of objects on computer.
T.Y. B.Sc.	IV	MT 347: A Optimization Techniques	<ul style="list-style-type: none"> Solve simple games using various techniques Analyze economic situations using game theoretic techniques · Recommend and prescribe which strategies to implement.
T.Y. B.Sc.	IV	MT 348 : Practical based on papers selected from 347A to 347 F	<ul style="list-style-type: none"> Solve optimal real life problem based on supply and demands. Solve simple games using various techniques · Analyze economic situations using game theoretic techniques · Recommend and prescribe which strategies to implement

Department of Statistics- Academic Year 2022-23

Programme Outcome : B.Sc. (Statistics)	
PO1	To understand the statistical methods and increase problem solving ability.
PO2	To acquire the strong foundation of statistical concepts which will benefit them in a master's degree
PO3	To use the knowledge of Statistical tools and techniques in solving real life problems/situations.
PO4	To acquire the knowledge of statistical software for problem solving.
PO5	To prepare students for entrance examinations.

Course Outcomes: B.Sc. (Statistics)

Class	Semester	Course Title with Sub. Code	Outcome
F.Y. B.Sc.	I	ST – 111: Descriptive Statistics I	<ul style="list-style-type: none">To acquaint students with some basic concepts in StatisticsTo compute various measures of central tendency, dispersion, skewness and kurtosisTo analyze data pertaining to attributes and the interpret the results
		ST – 112: Discrete Probability and Probability distribution I	<ul style="list-style-type: none">To introduce to the students the basic concepts of probability, axiomatic theory of probabilityTo distinguish between random and non-random experimentsTo find the probabilities of eventsTo obtain a probability distribution of random variable (one or two dimensional) in the given situation
		ST – 113 : PRACTICALS	<ul style="list-style-type: none">To use various graphical and diagrammatic techniques and interpretation.to analyse data pertaining to discrete and continuous variables and to interpret the results,to compute various measures of central tendency, dispersion, skewness and kurtosis.to interpret summary statistics of computer outputto summarize and analyze the data using computer
F.Y. B.Sc.	II	ST - 121: Descriptive Statistics II	<ul style="list-style-type: none">Compute the correlation coefficient for bivariate data and interpret it.Fit linear, quadratic and exponential curves to the bivariate data to investigate the relation between two variables.To analyze data pertaining to attributes and to interpret the results
		ST – 112: Discrete Probability & Probability DistributionsII	<ul style="list-style-type: none">to apply standard discrete probability distribution to different situations.To study properties of these distributions as well as interrelation between them
		ST – 123 : Practical	<ul style="list-style-type: none">to compute correlation coefficient, regression coefficients,to compute probabilities of bivariate distributions,to fit binomial and Poisson distributionsto compute probabilities of bivariate distributions.to draw random samples from Poisson and binomial distributions

S.Y. B.Sc.	I	ST 231: Discrete Probability Distributions, Time Series	<ul style="list-style-type: none"> • Apply the discrete distributions in real life problem. • Understand the concept of time series with its components. • To understand the concept of truncated distribution, and its real life applications
		ST 232: Continuous Probability Distribution	<ul style="list-style-type: none"> • Obtain summary statistics of a continuous random variable. • Obtain probability of events related to continuous random variable. • Obtain correlation and regression lines, m.g.f. moments, probabilities for bivariate continuous random variable. • Explain probability distributions, nature of curve, properties of continuous uniform, exponential, normal, distributions and relations between them.
		ST-233 Statistics Practical	<ul style="list-style-type: none"> • To understand the fitting of different distribution • Applications of discrete distribution • To understand model sampling • Understand the concept of time series with its components.
S.Y. B.Sc.	II	ST-241 Tests of Significance and Statistical Methods	<ul style="list-style-type: none"> • Understand multiple linear regression models with applications. • Formulate the null and alternative hypotheses and apply small, large sample tests in real life problems. • Understand the different ways of summarizing the Vital Statistics. • Formulate M/M/1 queue and find its parameter also find the average waiting time in queue.
		ST 242: Sampling Distributions and exact tests	<ul style="list-style-type: none"> • Derive probability distribution function of chi-square, t, F distribution • Explains interrelation between the above distributions and their properties. • Get familiar with statistical tests of hypothesis and are able to apply in real life situations in various fields.
		ST 243: Practical	<ul style="list-style-type: none"> • To conduct various tests of significance like averages, population proportions, independence of attributes, variance etc. included in theory (using calculators, software). • To compute probabilities of discrete and continuous probability distributions using R software. • To use software for finding basic summary statistics.

Course Outcomes: B.Sc. Zoology

Class	Semester	Course Title with Sub. Code	Outcome
F.Y. B.Sc.	I	ZO111 Animal Diversity I (CC)	<ul style="list-style-type: none">• The student will be able to understand classify and identify the diversity of animals.• The student understands the importance of classification of animals and classifies them effectively using the six levels of classification.• The student knows his role in nature as a protector, preserver and promoter of life which he has achieved by learning, observing and understanding life.
F.Y. B.Sc.	I	ZO 112 Animal Ecology (CC)	<ul style="list-style-type: none">• The learners will be able to Identify and critically evaluate their own beliefs, values and actions in relation to professional and societal standards of ethics and its impact on ecosystem and biosphere due to the dynamics in population.• To understand anticipate, analyse and evaluate natural resource issues and act on a lifestyle that conserves nature.• The Learner understands and appreciates the diversity of ecosystems and applies beyond the syllabi to understand the local lifestyle and problems of the community.• The learner will be able to link the intricacies of food chains, food webs and link it with human life for its betterment and for non-exploitation of the biotic and abiotic components.• The working in nature to save environment will help development of leadership skills to promote betterment of environment.
F.Y. B.Sc.	II	ZO 121 Animal Diversity II (CC)	<ul style="list-style-type: none">• The student will be able to understand classify and identify the diversity of animals.• The student understands the importance of classification of animals and classifies them effectively using the six levels of classification.• The student knows his role in nature as a protector, preserver and promoter of life which he has achieved by learning, observing and understanding life.
F.Y. B.Sc.	II	ZO 122 Cell Biology. (CC)	<ul style="list-style-type: none">• The learner will understand the importance of cell as a structural and functional unit of life.• The learner understands and compares between the prokaryotic and eukaryotic system and extrapolates the life to the aspect of development.• The dynamism of bio membranes indicates the dynamism of life. Its working mechanism and precision are responsible for our performance in life.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> The cellular mechanisms and its functioning depend on endo-membranes and structures. They are best studied with microscopy.
S.Y. B.Sc.	III	ZO – 231: Animal Diversity - III	<ul style="list-style-type: none"> The students will be able to understand, classify and identify the diversity of higher vertebrates. The students will be able to understand the complexity of higher vertebrates. The students will be able to understand different life functions of higher vertebrates. The students will be able to understand the linkage among different groups of higher vertebrates. The student will become aware regarding his role and responsibility towards nature as a protector, to understand his role as a trustee and conservator of life which he has achieved by learning, observing and understanding life.
S.Y. B.Sc.	III	ZO 232 Applied Zoology I	<ul style="list-style-type: none"> The learner understands the basics about beekeeping tools, equipment, and managing bee hives. The learner understands the basic information about fishery, cultural and harvesting methods of fishes and fish preservation techniques. The learner understands the biology, varieties of silkworms and the basic techniques of silk production. The learner understands the types of agricultural pests, Major insect pests of agricultural importance and Pest control practices.
S.Y. B.Sc.	IV	ZO – 241: Animal Diversity - IV	<ul style="list-style-type: none"> The students will be able to understand, classify and identify the diversity of higher vertebrates. The students will be able to understand the complexity of higher vertebrates. The students will be able to understand different life functions of higher vertebrates. The students will be able to understand the linkage among different groups of higher vertebrates. The student will become aware regarding his role and responsibility towards nature as a protector, to understand his role as a trustee and conservator of life which he has achieved by learning, observing and understanding life.
S.Y. B.Sc.	IV	ZO 242 Applied Zoology II	<ul style="list-style-type: none"> The learner understands the basics about beekeeping tools, equipment, and managing bee hives. The learner understands the basic information about fishery, cultural and harvesting methods of fishes and fish preservation techniques. The learner understands the biology, varieties of silkworms and the basic techniques of silk production. The learner understands the types of agricultural pests, Major insect pests of agricultural importance and Pest control practices
T.Y. B.Sc.	V	ZO 351 Pest Maagement	<ul style="list-style-type: none"> Describe morphological structure, various system of Calotes versicolor
			<ul style="list-style-type: none"> Define pest management.

Class	Semester	Course Title with Sub. Code	Outcome
			<ul style="list-style-type: none"> • Describe the economic, ecological, and sociological benefits of IPM. • Distinguish positive and negative impacts of pesticide use. • Understand problems resulting from misuse, overuse and abuse of chemical pesticides. • Define and describe pesticide resistance and how it develops. • Identify ecological and biological characteristics important in development of pest populations. • Identify 10 tactics commonly used in IPM and be able to distinguish them. • Understand society's role in IPM decisions. • Describe different groups of pests and compare them to weeds and plant pathogens. • Analyse and compare management tactics to determine the best approach to reducing pest populations, weeds and disease presence. • Locate appropriate, scientifically valid sources of information on specific tactics to manage insect pests, weeds, and diseases. • Know and how to develop an IPM program.
T.Y. B.Sc.	V	ZY 352 Histology	<ul style="list-style-type: none"> • The students will be able to understand, classify and identify the different types of tissue. • The students will understand the complexity of various tissues in an organ. • The students will be able to learn structure & functions of various tissues. • The students will understand the various diseases related to organs • The student will be able to know the role of glands in mammals.
T.Y. B.Sc.	V	ZO 353 Biological Chemistry	<ul style="list-style-type: none"> • Outline concept of pH and buffer, its importance and explain types of bond and buffers in biological system. Describe structure and properties of water • Explain and Classify types of sugars and demonstrate Isomerism, stereochemistry, racemisation of carbohydrates, biological and clinical significance. • Explain and Classify Protein, amino acids on the basis of their structures function. • Differentiate structures of proteins, state examples and tell bonds responsible for protein structures • Explain, classify and illustrate properties of enzyme, learn factors influencing enzyme activity, Isoenzymes in detail. Introduction the knowledge to relate vitamins to the type of deficiency diseases. • Explain and Classify lipids based on the structure, and functions and explain triglycerides, saponification
T.Y. B.Sc.	V	ZO 354 Genetics	<ul style="list-style-type: none"> • Learners shall be able to understand basic concepts of gene, lethal alleles ,Multiple alleles, cistron, muton and recon • The students will learn Mendel's law, Incomplete and complete dominance, Concept of gene mutation. • The students will learn about the concepts of population

Class	Semester	Course Title with Sub. Code	Outcome
			<p>genetics, Hardy Weinberg's law, Human population genetics, disorders and sex linked inheritance in human</p> <ul style="list-style-type: none"> The students will be able to understand, application of genetics in real life
T.Y. B.Sc.	V	ZO 355 Developmental Biology	<ul style="list-style-type: none"> Learners shall be able to understand concept from developmental biology-growth, differentiation, cell communication, morphogenesis Understand the theories of developmental biology The students will learn about the concepts of Gametogenesis, Fertilization, cleavage and blastula Understand the Morphogenesis and Organogenesis in Chicks
T.Y. B.Sc.	V	ZO 356 Parasitology	<ul style="list-style-type: none"> The students will be able to learn about basics and scope of parasitology. The students will be able to learn the types of host and parasite with examples. The students will be able to learn about the morphology, life cycle, pathogenicity and treatment of common parasites (Protists and Platyhelminthes). The students will be able to learn about host-parasite relationships and their effects on host body. The students will be able to learn about the arthropod parasites and their role as vector
T.Y. B.Sc.	V	ZO 3510 Aquarium Management	<ul style="list-style-type: none"> The students will be able to learn about basics of aquarium and fish keeping The students will be able to learn the biology of aquarium fishes The students will be able to learn about the food and feeding of aquarium fishes The students will be able to learn about fish transportation, aquarium maintenance
T.Y. B.Sc.	V	ZO 3511 Poultry Management	<ul style="list-style-type: none"> The students will be able to understand the Poultry farming practices. The students will be able to understand the poultry breeding techniques. The students will be able to understand poultry rearing techniques. The students will be able to understand feeding requirement and food ingredients. The students will be able to understand the poultry disease and their pathogens. The students will be able to understand market value of poultry products.
T.Y. B.Sc.	VI	ZO 361 Medical and Forensic Zoology	<ul style="list-style-type: none"> The students will be able to understand the basics principles of Medical and Forensic Zoology. The students will be able to understand scientific methods in crime detection. The students will be able to understand the advancements in the field of Medical and Forensic Zoology. The students will be able to understand modern tools, techniques and skills in forensic investigations. The students will be able to describe the fundamental principles

Class	Semester	Course Title with Sub. Code	Outcome
			and functions of forensic science and its significance to human society
T.Y. B.Sc.	VI	ZO 362 Animal Physiology	<ul style="list-style-type: none"> • The various physiological organ-systems and their importance to the integrative functions of the human body. • Understand Concept of energy requirements • Various aspects of Digestive physiology • Circulatory system with medical conditions • Understand Respiratory mechanism and gases transport. • Eliminations of waste materials from the body. • Develop understanding in Structure and functions of muscles • Understand formation of gametes and function of endocrine glands.
T.Y. B.Sc.	VI	ZO 363 Molecular Biology	<ul style="list-style-type: none"> • Learner shall get an insight into molecular mechanisms of various biological processes in cells and organisms • Learner shall get an insight into the Structure of DNA and RNA, DNA and RNA as genetic material • The course shall prepare learner to get insight into the Central Dogma of Molecular Biology • Learner shall also understand the concept of gene regulation • Learner shall get an insight into the DNA Damage and Repair
T.Y. B.Sc.	VI	ZO 364 Entomology	<ul style="list-style-type: none"> • Students will understand basic concepts in Entomology and its scope. • Learn morphology and anatomy of Insects. • Understand the concept of social organization in Insects. • Understand the development process of Insects. • Identify disease causing insect vectors. • Will be able to design and implement pest controlling methods against pests.
T.Y. B.Sc.	VI	ZO 365 Techniques in Biology	<ul style="list-style-type: none"> • The course shall explain in detail microscopy • Students shall get basic knowledge of and method used in micro-techniques • Students become aware about different haematological and Immunological techniques • Students will get the knowledge of PCR and DNA fingerprinting • Students will understand the methods used in Biodiversity and instruments used in field biology
T.Y. B.Sc.	VI	ZO 366 Evolutionary Biology	<ul style="list-style-type: none"> • Students will be able to learn most of the essential aspects of Evolutionary Biology in detail which will help them in acquiring better understanding regarding the subject. • Explain important processes, principles and concepts and critically evaluate theories and empirical research within evolutionary biology • Apply evolutionary theory and concepts to address empirical and theoretical questions in evolutionary biology. • Independently investigate evolutionary questions using literature and analyses of empirical data. • Communicate the principles, theories, problems and research results associated with questions that lie within the evolutionary framework to students

Class	Semester	Course Title with Sub. Code	Outcome
T.Y. B.Sc.	VI	ZO 3610 Environmental Impact Assessment	<ul style="list-style-type: none"> • Describe the concepts and division of environment • Students will be able to describe the meaning of pollution, its impact on living and non-living world. • Students can identify sustainable development • Students can learn environmental protection acts, EIA and EIA process. • Students can have an overview of Scheme for Accreditation of EIA Consultant Organizations (NABET / QCI)
T.Y. B.Sc.	VI	ZO 3611 Project	<ul style="list-style-type: none"> • Students have to complete the research project in the stipulated time and present the dissertation at the time of the examination in a proper format. Students should be encouraged to take up laboratory work, hands-on practical investigation and design experimental setup. • Field work to be carried out under proper supervision and permissions from the concerned authorities.

AISHE ID: C-41965

Programme Specific Outcomes: B.A. (English)	
1.	The Programme will develop competence of the students in four major skills of English language: Listening skill, Speaking skill, Reading Skill, Writing Skill
2.	Students will develop an appreciation of how the formal elements of language and genre shape meaning. They will develop a facility at writing in appropriate genres for a variety of purposes and audiences.
3.	Students will gain knowledge of the major traditions of literatures written in English and an appreciation for the diversity of literary and social voices within—and sometimes marginalized by—those traditions. They will develop an ability to read texts in relation to their historical and cultural contexts, in order to gain a richer understanding of both text and context, and to become more aware of themselves as situated historically and culturally.
4.	Students will develop the ability to read works of literary, rhetorical, and cultural criticism, and deploy ideas from these texts in their own reading and writing.
5.	They will express their own ideas and understand how their own approach compares to the variety of critical and theoretical approaches.

			intellectual property rights, negotiable instrument Act related to bank or business transaction.
T.Y.B.Com.	V	Auditing and Taxation Course code: 304	<ul style="list-style-type: none"> • Knowledge aim: After studying this course students are able to understand evolution of the subjects and their interrelationship. Students can describe of the subject of Auditing and Taxation and its importance. This subject is improving the knowledge of Auditing and Taxation and useful for future Development of the students. • Competence aim: Students can able to apply auditing and taxation and its rules and regulation. • Skills: The student can think about this subject and also understand the techniques and skill of the subject and understand the procedure of Auditing and taxation rules.
T.Y.B.Com.	V	Advanced Accounting Course code: 302	<ul style="list-style-type: none"> • Knowledge aim: After studying this course students are able to understand wide verity of practical problems, basic concept, Accounting Standards and financial Statements, and also to create awareness about the subject. • Competence aim: : Students can able to apply the knowledge of the subject of Advanced Accounting. • Skills: To acquire the practical knowledge and skills about this subject also create awareness about 3)Advanced Accounting, techniques, work, and procedure of solving of various problems.
T.Y.B.Com.	V	Business Administration II Course code: 305A	<ul style="list-style-type: none"> • Knowledge aim: By learning this subject T.Y.B.Com level student can become aware of basic concept of Human Resource Development, recruitment, training career planning, performance appraisal. As well as nature of marketing function of a business enterprises. • Competence aim: After getting the knowledge of Business Administration II student can develop their business related to human resources, for the recruitment and performances. • Skills: Student will able to use all concepts while recruiting the man power in the job and also they can use marketing skills and modern trends.
T.Y.B.Com.	VI	Business Administration III Course code: 306A	<ul style="list-style-type: none"> • Knowledge aim: BY Learning Business Administration III at T.Y.B. com level will help to acquaint the student basic concepts in finance and production function of a business enterprise. • Competence aim : After getting the knowledge of Business Administration students can learn Financial planning and capitalization or they can use their knowledge where they were worked. • Skills: Student will able to use all concepts of finance and production, material handling while they were in jobs or business.Students will understand the handling and rearing of animals and can get information about instruments or appliance used in various industries such as Apiary and Silk Industries.
T.Y.B.Com.	VI	Marketing Management II	<ul style="list-style-type: none"> • Knowledge aim. After studying this course students are able to understand evolution of these subjects and also to

AISHE ID: C-41965

Department of B. Voc.- Academic Year 2022-23

Program outcome: B. Voc.	
PO 1	Ability to apply the knowledge of science and engineering principles for analyzing and solving electrical and electronics engineering problems.
PO 2	Ability to identify, analyze real life electrical and electronics engineering problems.
PO 3	Ability to develop solutions for real life electrical and electronics engineering problems.
PO 4	Ability to develop sophisticated equipment and experimental system for carrying out detailed investigation to multifaceted electrical and electronics engineering problems.
PO 5	Ability to develop and utilize modern tools for modelling, analyzing, and solving electrical and electronics engineering problems.
PO 6	Dedication to work as an electrical or electronics engineer who is capable of identifying solutions to various local and global problems faced by the society.
PO 7	Ability to design and develop modern systems for the up keep of pollution free environment.
PO 8	Ability to express ideas clearly and communicate orally as well as in writing with others.

Affiliated with Savitribai Phule Pune University, Pune (ID No PU/NS/ASC/027/1984)

AISHE ID: C-41965

Program Specific outcomes: B. Voc.

1	Provide effective solutions in the fields of Electrical Power system, Electrical machine Switchgear and protection.
2	Design and Develop various Electrical and Electronics Systems, particularly renewable energy systems.
3	Install and maintain different Electrical Equipment.
4	Demonstrate the overall knowledge and contribute for the betterment of the society.

Course Outcomes of First Year B. Voc.

Semester I

Year	Course	Course Outcome
FY (Sem-I) Communication Skills	BVET 11.1	To acquired knowledge about office correspondence in Marathi as well as in English language.
	BVET 11.2	To learn about Appearance and layout of Business letter such as Equiry, Sales, administrative, complaint, order letter.
	BVET 11.3	To learn about Writing and comprehensive
	BVET 11.4	To prepare Resume, to acquired knowledge about Job application letter.
FY (Sem-I) Basic Electrical Engineering-I	BVET12.1	Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
	BVET12.6	Obtain solution for electrical network analytically
	BVET12.7	Demonstrate the awareness on social issues like conservation of electrical energy, electrical safety.
FY (Sem-I) Basic Electrical Engineering-II	BVET13.1	Understand and demonstrate the fundamental of electromagnetism
	BVET13.2	Differentiate between electric and magnetic circuits.
	BVET13.3	Apply concept of electromagnetism for the working of transformer.
	BVET13.4	Explain Three Phase delta and star connection

Semester II

Year	Course	Course Outcome
FY (Sem-II) Applied Mathematics	BVET 21.1	Evaluate higher order linear differential equations using appropriate techniques for modelling and analysing electrical circuits.
	BVET 21.2	Solve problems related to trigonometric functions and limits.
	BVET 21.3	Perform vector differentiation and integration.
	BVET 21.4	Identify logic gates and application to switching circuit.
FY (Sem-II) Electrical Appliances-I	BVET 22.1	Acquire necessary skills/hand on experience/ working and testing knowledge on mustimeters, galvanometers, ammeters, voltmeters.
	BVET 22.2	To Acquire knowledge about construction and working of various Appliances Iron, Room heater, Toaster, Kettle, coffee percolator, stoves, Water heaters, Water purifiers.
	BVET 22.3	To acquire knowledge about practical testing (SC, OC, Earth Fault) and fault finding of above appliances.
	BVET 22.4	To acquire knowledge about practical repairing (for electrical & mech. Fault) of above appliances.
FY (Sem-II) Electrical Machines I	BVET 23.1	To study the working principle of transformer
	BVET 23.2	Discussion of single-phase transformer
	BVET 23.3	Detailed construction of D.C. machine
	BVET 23.4	Study of starter and speed control of DC machine
	BVET 23.5	Explain the Rotating Magnetic Field in AC machines
	BVET 23.6	Distinguish between Starters for slip-ring and cage rotor induction motors

Course Outcomes of Second Year B. Voc. Semester I

Year	Course	Course Outcome
SY (Sem-I) Computer Technology	BVET 31.1	Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components
	BVET 31.2	Demonstrated a basic understanding of computer hardware and software.
	BVET 31.3	Understand the difference between an operating system and an application program, and what each is used for in a computer.
	BVET 31.4	Understand the difference between hardware and software.
	BVET 31.5	Demonstrate computer architecture concepts related processors, memories and I/Os
SY (Sem-I) Electrical Appliances-II	BVET 32.1	Acquire necessary skills/hand on experience/ working and testing knowledge about testing equipment and basic control equipment.
	BVET 32.2	To Acquire knowledge about construction and working of various non – motorised and motorised Appliances such as Tube light, Water heater, geyser,

Year	Course	Course Outcome
		hair dryer, fan regulator, table lamp, torch, doorbell.
	BVET 32.3	To acquire knowledge about practical testing (SC, OC, Earth Fault) and fault finding of above appliances.
	BVET 32.4	To acquire knowledge about practical repairing (Trouble shooting) of above appliances.
SY (Sem-I) Electrical Machines II	BVET 33.1	Explain construction & working principle of three phase synchronous machines
	BVET 33.2	Demonstrate operation of synchronous motor at constant load and variable excitation (v curves & \wedge curves) & constant excitation and variable load.
	BVET 33.3	Explain Speed control methods of three phase induction motor.
	BVET 33.4	Discussion of three phase transformer
	BVET 33.5	Develop equivalent circuit of single-phase induction motor by performing no load & blocked rotor test.

Semester II

Year	Course	Course Outcome
SY (Sem-II) Environment Awareness	BVET 40.1	Articulate the interconnected and interdisciplinary nature of environmental studies.
	BVET 40.2	Demonstrate an integrative approach to environmental issues with a focus on sustainability.
	BVET 40.3	Use critical thinking, problem-solving, and the methodological approaches of the social sciences, natural sciences, and humanities in environmental problem solving;
	BVET 40.4	Communicate complex environmental information to both technical and non-technical audiences
	BVET 40.5	Understand and evaluate the global scale of environmental problems
	BVET 40.6	Reflect critically on their roles, responsibilities, and identities as citizens, consumers and environmental actors in a complex, interconnected world.
SY (Sem-II) Entrepreneurship and Employable Skill	BVET 41.1	Appreciate the concept of Entrepreneurship.
	BVET 41.2	Identify entrepreneurship opportunity.
	BVET 41.3	Develop entrepreneurial values and attitude.
	BVET 41.4	Collect and use the information to prepare project report for business venture.
	BVET 41.5	Develop awareness about enterprise management
SY (Sem-II) Basic Electronics	BVET 42.1	Develop characteristics of different power electronics switching devices.
	BVET 42.2	Express the design and control of rectifier and filters.
	BVET 42.3	Explain working principle of power electronics Semiconductor diodes.
	BVET 42.4	Analyse switching technologies implemented in recent technologies.
SY (Sem-II) Electrical	BVET 43.1	Examine various characteristics of measuring instruments, their classification and range extension technique.

Year	Course	Course Outcome
Measurements and Instrumentation	BVET 43.2	Classifies resistance, apply measurement techniques for measurement of resistance, inductance.
	BVET 43.3	Explain construction, working principle and use of dynamometer type wattmeter for measurement of power under balance and unbalance condition.
	BVET 43.4	Explain Construction, working principle of 1-phase and 3-phase induction, static energy meter and calibration procedures.
	BVET 43.5	Use of CRO for measurement of various electrical parameters, importance of transducers, their classification, selection criterion and various applications.
	BVET 43.6	Measurement of various physical parameters using transducers

**Course Outcomes of Third Year B. Voc.
Semester I**

Year	Course	Course Outcome
TY (Sem-I) Testing and Maintenance of Electrical Equipment	BVET 51.1	Classify distribution systems, its types and substations
	BVET 51.2	Design of different earthing systems for residential and industrial premises
	BVET 51.3	Understand the practical aspects of condition monitoring and testing of various Electrical Equipment's
	BVET 51.4	Explain the different types of maintenance of Electrical Machines.
	BVET 51.5	Estimating and Costing of residential and industrial premises.
	BVET 51.6	Explain the Importance of Electrical safety.
TY (Sem-I) Power System & Switchgear Protection	BVET 52.1	Describe arc interruption methods in circuit breaker.
	BVET 52.2	Describe Construction, and working of different high Voltage circuit breakers such as ABCB, SF6 CB, and VCB.
	BVET 52.3	Classify and describe different type of relays such as over current relay, Reverse power relay.
	BVET 52.4	Demonstrate a protection scheme used for transformer, alternator and busbar.
	BVET 52.5	Express transmission line protection schemes.
TY (Sem-I) Power Electronic Drives	BVET 53.1	Analyse the operation of the converter, chopper fed dc drive.
	BVET 53.2	Classify the operation of both classical and modern induction motor drives.
	BVET 53.3	Design current and speed controllers for different drives.
	BVET 53.4	Select the drives for any particular application.
	BVET 53.5	Describe different operation of DC motor speed control using converters and choppers.
	BVET 53.6	Analyse the operation of Permanent magnet synchronous motor and Brushless DC Motor.

Semester II

Year	Course Outcome No.	Course Outcome
TY (Sem-II) Illumination Engineering	BVET 61.1	Explain lighting fixtures and its applications.
	BVET 61.2	Design commercial and residential illumination schemes
	BVET 61.3	Describe Quantification and Measurement of light. .
	BVET 61.4	Demonstrate the basics of lighting and illumination and its parameters
	BVET 61.5	Describe modern trends in illumination, street lighting and flood lighting.
TY (Sem-II) Electric & Hybrid Vehicle	BVET 62.1	Explain the basics of electric and hybrid electric vehicles, their Characterisation,
	BVET 62.2	Battery based energy storage and analysis used in hybrid electric vehicles.
	BVET 62.3	Discuss different Battery Management Systems for hybrid electric vehicles.
	BVET 62.4	Discuss Concept & Architecture of Hybrid Electric Vehicles.
	BVET 62.5	Discuss the various drive system for various motors. Analysis of vehicle to grid system.
TY (Sem-II) Special Purpose Machine	BVET 63.1	Evaluate the basic operation and performance of special machines and can select special machines for different purpose
	BVET 63.2	Acquire knowledge about the constructional details and principle of operation of PM synchronous machines.
	BVET 63.3	Acquire knowledge about the working of Reluctance motors.
	BVET 63.4	To learn about Construction, working, characteristics and application of stepper motor
	BVET 63.5	Acquire the knowledge of fundamentals, construction details and classification of linear and Ultrasonic motor.
TY (Sem-II) Project	BVET 64.1	Analyze the given problem.
	BVET 64.2	Generate alternative solutions to the problem
	BVET 64.3	Compare & select feasible solutions amongst alternative generated.
	BVET 64.4	Develop and manufacture new/modified equipment.
	BVET 64.5	Acquire technical knowledge beyond curriculum

AISHE ID: C-41965

Programme Outcomes (PO) & Course Outcomes (CO) offered by the institution for Post Graduate Programmes

Department of Chemistry- Academic Year 2022-23

Programme Outcome: M.Sc. Analytical Chemistry	
PO 1	Learn the terms, theories, assumptions, methods, principles, theorem statements and classification, Disciplinary knowledge
PO 2	Fix out the problem and resolve it using theories and practical knowledge, Critical thinking and Problem solving
PO 3	Inculcate his knowledge for carrying projects and advanced research related skills, Research related skill
PO 4	Actively participate in team on case studies and field-based situations, Cooperation/Team work
PO 5	Analyse and interpret ideas, evidences and experiences with learned scientific reasoning, Scientific reasoning
PO 6	Aware and implement the subject facts that can be applied for the personal and social development, Reflective thinking
PO 7	Use digital literacy to retrieve and evaluate subject related information, Information/Digitally literacy
PO 8	Get moral and ethical values for society as well as in research, Moral and ethical awareness
PO 9	Give analytical reasoning to interpret research data, Analytical Reasoning
PO 10	Improve their managerial skills and abilities in subject related activities, Leadership readiness/qualities
PO 11	Inculcate continuous learning habit through all available resources, Lifelong readiness/qualities

Program Specific Outcomes: M.Sc. Chemistry	
PSO 1.	PSO-1: Disciplinary knowledge Demonstrate a comprehensive knowledge of all disciplines.
PSO 2.	PSO-2: Critical thinking To assess and evaluate facts, claims and arguments using their scientific knowledge
PSO 3.	PSO-3: Research-related skills To define a problem, analyse, interpret and draw conclusion by planning, implementing and reporting the results of an experiment.
PSO 4.	PSO-4: Information/digital literacy To access, evaluate and apply a variety of useful sources
PSO 5.	PSO-5: Multicultural competence To participate in multicultural society and communicate the subject knowledge for the betterment of society
PSO 6.	PSO-6: Lifelong learning To acquire knowledge and skills including "Learning how to learn" that are necessary in learning activities throughout life

**Course Outcomes: M.Sc. Analytical Chemistry****Semester I**

Class	Course	Outcomes
M. Sc. -I	CHE-501 Physical Chemistry-I	<ul style="list-style-type: none">• CO1: Students should be able to remember the concepts of thermodynamic parameters, quantum mechanical postulates, rate laws of chemical reactions and computation of macroscopic properties of matter.• CO2: Students should understand the basics like state function and path function, Schrodinger wave equation, kinetics of fast reactions, partition functions and ensembles.• CO3: Students should be able to apply the knowledge of various quantum mechanical methods to determine the different molecular properties and built the concept of the relation between thermodynamics and quantum mechanics.• CO4: Students should be able to analyze the rates of various chemical reactions both theoretically and experimentally and also observe the effect of catalyst and determine energies of activation of such reactions.• CO5: Students should be able to evaluate variation of thermodynamic parameters for multi component systems and their variation with other extensive properties, Schrodinger wave equation and its application to hydrogen and hydrogen like atoms.• CO6: Students should be able to create the solutions to avoid excess use of energy in chemical reactions by applying their knowledge of thermodynamics and chemical kinetics.
	CHE-502 Inorganic Chemistry-I Section I- Molecular Symmetry and its applications to Inorganic chemistry	<ul style="list-style-type: none">• CO-1: Define symmetry elements and symmetry operations, classes, properties of a group, group multiplication table, etc.• CO-2: Classify symmetry elements, point group, Group, sub-group and classes.• CO-3: Use wave function as basis for determination of irreducible representations and the Great Orthogonality theorem and its consequence.• CO-4: Solve problem based on point group, matrix representation and character table• CO-5: Construct character table of various point group• CO-6: Justify which can take part in bonding on the basis of SALCs and point group of molecules.
	CHE-502 Inorganic Chemistry-I Section-II: Chemistry of Main Group Elements	<ul style="list-style-type: none">• CO-1: Define electron deficient, electron precise and electron rich species, Pseudohalogens, Oxoacids and Oxidation state.• CO-2: Describe special properties of fluorine, Nitrogen activation, Oxo acids of nitrogen, sulphur and phosphorous, synthesis and structure of xenon fluorides.• CO-3: Explain term metal sulfides, selenides, tellurides, polonide, inter-halogens, Halogen oxides, Graphene, fullerenes and carbon nanotube.

Class	Course	Outcomes
		<ul style="list-style-type: none"> • CO-4: Determine Oxidation states of nitrogen and their interconversion and application of crown ether in extraction of alkali and alkaline earth metal. • CO-5: Differentiate between diamond and graphite, Pseudohalogens and interhalogens. • CO-6: Classify the hydrides, borides and oxyacids and draw their structure.
	CHEPIA-503 Organic Chemistry-I	<ul style="list-style-type: none"> • CO1: Understand the concepts of aromaticity, stereochemistry, and oxidation-reduction reactions • CO2: Learn the concepts of stereochemistry. • CO3: Predict the product and mechanism of the reactions. • CO4: Advance knowledge of various stereochemical aspects. • CO5: Apply the concepts of oxidations and reduction to solve the advance problems. • CO6: Develop problem solving ability
	CHE- 504 Physical Chemistry Practical I	<ul style="list-style-type: none"> • CO1: Students will grasp the concept of reaction rate and its significance in Chemical Kinetics. • CO2: Students will learn how to use experimental data to deduce rate laws and rate constants. • CO3: Students will be familiar with the fundamental principles of colorimetry and spectrophotometry including Beer's law, Lambert- Beer's law and the relationship between absorbance and concentration. • CO4: Students will able to operate the instruments like spectrophotometer and colorimeter. • CO5: Students will be able to determine the densities of the solutions and can calculate molar volumes
	CHE-505 Inorganic Chemistry Practical-I	<ul style="list-style-type: none"> • CO-1: Prepare solution of required conc. and handle the laboratory equipment properly. • CO-2: Perform experiment accurately and able to perform calculation. • CO-3: Explain experiment and principal of experiment in detail. • CO-4: Perform calculations and discuss results and write conclusions of the experiment. • CO-5: Apply knowledge to a) design experiment for given aim or modify experiment to enhance results. b) to find out lacuna in experimental procedure. • CO-6: Solve problem/ numerical depending on given experimental data / information.
	CHE-506 Organic Chemistry Practical I	<ul style="list-style-type: none"> • CO1: Understand the theoretical aspects behind separation, purification and synthesis of organic compounds. • CO2: Acquire the experimental skills for separation, purification, identification and synthesis of organic compounds. • CO3: Design experimental set up for performing the organic reactions. • CO4: Monitor the organic reactions. • CO5: Describe the mechanistic aspects of organic reactions. • CO6: Develop problem solving ability.
	CHEPIA-507 (D) Basic Organic Chemistry	<ul style="list-style-type: none"> • CO1: Understand the concepts of chemical bonding, various structural effects, acids and bases, and types of reactions • CO2: Basic knowledge of aliphatic and aromatic substitutions, elimination and addition reactions • CO3: Understand and identify the types of organic reactions. • CO4: Write the mechanism of aliphatic and aromatic substitutions, elimination and addition reactions and oxidation-reduction reactions

Class	Course	Outcomes
		<ul style="list-style-type: none"> • CO5: Solve the problems involving multiple steps. • CO6: Develop problem solving ability of the students
	CHE-508 Research methodology	<ul style="list-style-type: none"> • CO1: Develop a comprehensive understanding of different research methodologies and their applications in mathematics. • CO2: Cultivate critical thinking and analytical skills necessary for identifying research problems and formulating research questions. • CO3: Provide practical experience in designing experiments, collecting and analyzing data, and interpreting research results. • CO4: Foster effective communication skills for presenting research findings orally and in written form. • CO5: Promote ethical research practices and awareness of responsible conduct in mathematical research • CO5; Develop problem solving ability.

Semester-II

Class	Course	Outcomes
MSc-I	CHE- 551 Physical Chemistry-II	<ul style="list-style-type: none"> • CO1: Remember basic concepts of molecular spectroscopy, selection rules, intensity of spectral lines, radioactive decay and decay kinetics. • CO2: Understand principles and applications of rotational, vibrational, Raman, electronic and Mossbauer spectroscopy. Understand concepts of nuclear and radiation Chemistry. Applications of Radioisotopes • CO3: Apply various spectroscopic techniques for gaining insights into molecular structure • CO4: Analyse vibrating diatomic molecule, simple harmonic and anharmonic oscillator, Scattering of light, Raman Spectrum, interaction of γ radiation with matter and radiation dosimetry. • CO5: Evaluate bond length, vibrational frequency, force constant and dissociation energy using spectral data. • CO6: Able to create theoretical rotational and vibrational spectra of simple molecules. Identify and define various types of nuclear changes or processes including fission, fusion and decay reactions
	CHE-552: Inorganic Chemistry-II SECTION-I: Coordination Chemistry	<ul style="list-style-type: none"> • CO-1: Define R. S. term, configuration, microstate, paramagnetic, diamagnetic ferromagnetic, antiferromagnetic, Curie and Neel temperature. • CO-2: Identify complex ions showing same R.S. terms, degeneracy of ground state terms of metal ions, and spin multiplicities of different configurations. • CO-3: Interpret electronic spectra for spin allowed Oh and Td complexes using Orgel diagram, Magnetic properties of A, E and T ground terms in complexes and selection rules. • CO-4: Calculate frequencies of absorption spectrum, $10Dq$, Racah and nephelauxetic parameter for a complex, and magnetic moments of complexes • CO-5: Construct microstate table for various configuration and prepare correlations diagram and Tanabe-Sugano diagram for various configurations in Td an Oh ligand field. • CO-6: Assess appropriate full spectroscopic terms for various configuration/ion/term.
	CHE-552: Inorganic Chemistry-II	<ul style="list-style-type: none"> • CO-1: Define metalloproteins, metallo-enzymes, photosynthesis, HSAB concept, nucleic acids, metalloregulation, Biopolymer effects and acetylcholine receptor.

Class	Course	Outcomes
	SECTION-II: Bioinorganic Chemistry	<ul style="list-style-type: none"> • CO-2 : Explain chelate effect and Irving-William series, pKa values of coordinated ligands, Tuning of redox potential, and Reactions of coordinated ligands. • CO-3: Describe Fe-S clusters, model compounds and spontaneous self-assembly, metals in medicine, blue copper proteins, and cytochromes, and Na/K pumps. • CO-4: Express nitrogen fixation, detoxification of mercury, structure of RNA, cis-platin, amino acids, siderophore, and calmoduline zinc finger proteins. • CO-5: Distinguish between hemoglobin and myoglobin, transferrin and ferritin, photosystem-I and photosystem-II. • CO-6: Decide role of metals in biological system, medicine, blood coagulation, oxygen storage and transport, photosynthesis and uptake and transport of iron
	CHEPIA-553 Organic Chemistry-I I	<ul style="list-style-type: none"> • CO1: Understand the concepts of molecular rearrangements • CO2: Basic knowledge of Organic Spectroscopy such as UV, IR and NMR. • CO3: Solve the problems based on molecular rearrangement reactions. • CO4: Deduce the structure from the spectral data and justify the findings. • CO5: Apply the concepts of oxidations and reduction to solve the advance problems. • CO6: Develop problem solving ability.
	CHE- 554 Physical Chemistry Practical II	<ul style="list-style-type: none"> • CO 1: Students will grasp the fundamental principles of Conductometry, Polarography, Potentiometry and pH metry. • CO 2: Students will familiar with the operation of Conductometer, Polarimeter, Potentiometer and pH meter. • CO 3: Students will understand the concepts of conductance, resistance and learn how to calculate and interpret these values. • CO 4: Students will learn to interpret polarographic waves and understand their significance in identifying electroactive species and determining their concentration. • CO 5: Students will explore the applications of Potentiometry in various fields such as acid- base titrations, determination of pH and analysis of ionic concentration
	CHE-555: Inorganic Chemistry Practical-II	<ul style="list-style-type: none"> • CO1: Define coordination complex, cell constant, resistance, specific conductance, equilibrium constant, absorbance, Beers law, solubility product, chromatography, etc. • CO2: Discuss photochemistry of potassium trioxalatoferrate complex, kinetics of formation of Cr(III)-EDTA, Determination of Cu(II) and Fe(II) by solvent extraction technique. • CO3: Outline the flow-chart for synthesis of [Mn(acac)₃], Chloropentaamminecobalt(III) chloride, Nitro pentaamminecobalt(III) chloride, Bis[TrisCu(I)thiourea complexes. • CO4: Estimate purity of the [Mn(acac)₃], Chloropentaamminecobalt (III) chloride, Nitro pentaamminecobalt (III) chloride, Bis[TrisCu(I)thiourea complexes. • CO5: Determine equilibrium constant of M-L systems Fe(III)-Sulphosalicylic acid, magnetic susceptibility (χ_g and χ_m) of mercury tetracyanato cobalt or Fe(acac) and magnetic susceptibility (χ_g and χ_m) of mercury tetracyanato cobalt or Fe(acac). • CO6: Calculate the quantity from observation of the experiments and Interpret the result obtained respective experiments.

Class	Course	Outcomes
	CHE-556 Organic Chemistry Practical II	<ul style="list-style-type: none"> • CO1: Understand the theoretical concepts behind organic synthesis. • CO2: Acquire the experimental skills for separation, purification, identification and synthesis of organic compounds. • CO3: Design experimental set up for performing the organic reactions. • CO4: Monitor the organic reactions and analyse the products using spectral results. • CO5: Describe the mechanistic aspects of organic reactions. • CO6: Develop problem solving ability.
	CHE-557(A) Organometallic Compounds and Inorganic Reaction	<ul style="list-style-type: none"> • CO1: Define various terms in organometallic chemistry and inorganic reaction mechanism etc. • CO2: Explain/Discuss various reaction mechanisms such as ligand insertion, inner and outer sphere mechanism, ligand substitution reaction. • CO3: Discuss 1. Structure and bonding in carbonyl and organometallic complexes, 2: Trans effect, 3. Ligand field effects, catalytic cycles, 4. Inert and labile complexes, 5. Synthesis methods of organometallic compounds, etc. • CO4: Apply 18 electron rule. Applications of organometallic compounds and mechanism of these reactions. • CO5: Demonstrate IR spectra of carbonyl complexes, deduce structure of carbonyl complexes • CO6: Justify structures of organometallic compounds from spectral data

Semester III

Class	Course	Outcomes
M. Sc. - II	CHA-390: Electrochemical and Thermogravimetric Methods of Chemical Analysis	<ul style="list-style-type: none"> • CO1: Define various terms in electrochemistry and thermogravimetry. • CO2: Explain instrumentation in electrochemistry and thermogravimetry • CO3: Describe basic principles of electrochemistry and thermogravimetry
	CHA-391: Analytical Method Development and Extraction Techniques	<ul style="list-style-type: none"> • CO-1 Define / understand various terms in analytical extraction and method development and validation. • CO-2: Explain instrumentations and methodology in analytical extraction. • CO-3: Explain / describe basic principles of analytical extraction method development and validation.
	CHA-392: Advanced Chromatographic Methods of Analysis	<ul style="list-style-type: none"> • CO-1: Define / understand various terms in chromatography (GC and HPLC) and mass spectroscopy. • CO-2: Explain instrumentations in chromatography (GC and HPLC) and mass spectroscopy. • CO-3: Explain / describe i) basic principles of chromatography (GC and HPLC) and mass spectroscopy. ii) Separation in GC / HPLC column. iii) Functioning and construction of GC / HPLC/ MS detectors.
	CHA-393: Analysis of Food and Controlled Substances	<ul style="list-style-type: none"> • CO1: Define / understand various terms in food analysis techniques and methods, forensic science and drug substances. • CO2: Explain methods and principles of analysis of i) Food - carbohydrates, proteins, preservatives, ii) drug substances.

Class	Course	Outcomes
		<ul style="list-style-type: none"> • CO3: Select appropriate methods of food analysis for its quality.
	CCPP-3: Practical I: Basics of Instrumental Methods of Chemical Analysis	<ul style="list-style-type: none"> • CO1: Maintain proper record of analytical data in notebook. Observe personal safety in laboratory and able to handle all chemicals, instruments, etc safely in laboratory. • CO2: Define / understand various terms involved in practical methods of quantitative analysis. • CO3: Explain instrumentations of colorimeter, spectrophotometer, photofluorometer, TGA, HPLC, GC, Flame-photometer, CV, AAS, etc. • CO4: Explain / describe basic principles of chromatography and different instrumental methods of analysis. Able to handle particular instrument according to SOP.

Semester-IV

Class	Course	Outcomes
MSc-II	CHA-490: Advanced Analytical Spectroscopic Techniques	<ul style="list-style-type: none"> • CO1: Define / understand various terms in atomic absorption, atomic emission, fluorescence, ESR and electron spectroscopy. • CO2: Explain instrumentation of atomic absorption, atomic emission, ICP-AES, ICP-AES-MS, fluorescence, ESR and electron spectroscopy. • CO3: To describe basic principles of atomic absorption, atomic emission, ICP-AES, ICP-AES-MS, fluorescence, ESR and electron spectroscopy. • CO4: Select appropriate methods for sample treatment in AAS / AES, ICP-AES, ICP-AES-MS.
	CHA-491: Chemical Methods of Pharmaceuticals Analysis	<ul style="list-style-type: none"> • CO-1: Define / understand various terms in pharmaceutical raw material and finished product analysis. • CO-2: Explain various pharmaceutical dosage forms and types of raw materials used. • CO-3: To describe basic principles of methods of pharmaceutical analysis according to IP. • CO-4: Explain importance of particular test in pharmaceutical raw material and finished product analysis.
	CHA-492: A) Laboratory Automation and Environmental Analytical Chemistry	<ul style="list-style-type: none"> • CO-1: Define / understand various terms in – i) Laboratory automation and sensors, ii) environmental pollution, analysis of water and air. • CO-2: Explain instrumentation of automated laboratory analysis and sensors. • CO-3: To describe basic principles of automated laboratory analysis and sensors. • CO-4: Explain importance of automated laboratory analysis and sensors.
	CHA-492: B) Analytical Chemistry of agriculture, Polymer and Detergents	<ul style="list-style-type: none"> • CO1: Define / understand various terms in soil analysis, pesticide residue analysis, detergent analysis and polymer analysis. • CO2: Explain / describe techniques / methods of soil analysis, pesticide residue analysis, detergent analysis and polymer analysis. • CO3: To describe basic principles, techniques / methods of soil analysis, pesticide residue analysis, detergent analysis and polymer analysis.

Class	Course	Outcomes
	CHA-493: A) Optional Analytical Chemistry Practical	<ul style="list-style-type: none"> • CO 1: Maintain proper record of analytical data in notebook. Observe personal safety in laboratory and able handle all chemicals, instruments, etc safely in laboratory. • CO 2: Define / understand various terms involved practical methods of quantitative analysis. • CO 3: Perform analysis of sample with described procedure. Able to handle analytical instruments.
	CHA-493: B) Project	<ul style="list-style-type: none"> • CO 1: Maintain proper record of analytical data in note book for research purpose. • CO 2: Perform review of literature related to the topic of project work and design the problem for project work. • CO 3: Decide and describe methodology for problem to solve proposed problem in the form of project. Decide and perform application of research work.

AISHE ID: C-41965

Department of Physics- Academic Year 2022-23

Program outcome: M.Sc. (Physics)	
1.	PO1: Demonstrate and understanding of principles and theories of physics. These include: Classical Mechanics, Statistical and thermodynamics, atomic and Molecular physics, Communication physics, electrodynamics, electronics, optics, Laser, nuclear physics and quantum mechanics.
2.	PO2: Demonstrate ability to apply knowledge learned in classroom to set and perform simple laboratory experiments
3.	PO3: Solve physics problems using the appropriate methods in mathematical, theoretical and computational physics

**Course Outcomes: M.Sc. Physics****Semester I**

Class	Course	Outcome
MSc (Paper-I)	PHY 501 MJ: Mathematical Methods in Physics	<ul style="list-style-type: none">• CO1: To understand the concept of the Revision on Vector space: Vectors (dependent and independent), Vector space, Hilbert space, Dimension of vector space, Matrix representation, Similarity transformation, Eigen values and Eigen vectors, Inner product, Orthogonality• CO2: To understand the concept of the Gramm-Schmidt orthogonalization procedure, Self-adjoint and unitary transformation, Eigen values and Eigen vectors of Hermitian and Unitary transformation, Diagonalization• CO3: Explain the Fourier series: Definition, Dirichlet's Condition, Convergence, Fourier Integral and Fourier Transform• CO4: State and Explain convolution theorem• CO5: State and prove Parseval's identity• CO6: Solve numerical problems on Application to the solution of differential equations• CO7: Explain the Laplace transform and its properties, Fourier transform and Laplace transform of Dirac Delta function
MSc (Paper-II)	PHY 502 MJ Statistical Mechanics	<ul style="list-style-type: none">• CO1: Describe transport phenomena and compute coefficient of thermal conductivity, viscosity and diffusion in terms of mean free path.• CO2: Define and discuss the concepts and roles of thermodynamic functions from the view point of statistical mechanics.• CO3: Derive Binomial distribution and Gaussian probability distribution using random walk problem and calculate mean values for a statistical system.• CO4: Discuss the concepts of microstate and macro state, basic postulates and behavior of density of states for model system and calculate the number of microstates for different statistical systems.• CO5: Differentiate thermal, mechanical and general interaction between statistical system.• CO6: Derive and compare Maxwell Boltzmann, Bose-Einstein and Fermi-Dirac distributions; state where they are applicable and explain the connection between classical.• CO7: Derive probability distribution formula for micro canonical, canonical ensemble and calculate mean values in canonical ensemble.• CO8: Discuss applications for canonical ensemble.

Class	Course	Outcome
MSc (Paper-III)	PHY 503 MJ: Classical Physics	<ul style="list-style-type: none"> • CO1: To know the Lagrangian approach in classical mechanics and applications of Lagrangian formulation • CO2: To understand the Hamiltonian approach in classical mechanics and applications • CO3: To know about Variational principle and its applications • CO4: The students will introduce about the newton's laws of motion and knowledge about the applications of newton's laws of motion. • CO5: This paper enables the students to understand the Lagrangian approach in classical mechanics. • CO6: The students should be able to understand Hamiltonian formulation with applications • CO7: The paper also enables the students to know about Variational principle with applications

Semester II

Class	Course	Outcome
MSc (Paper-IV)	PHY 504 MJ: Quantum Physics	<ul style="list-style-type: none"> • CO1: Utilize the postulates of quantum mechanics to describe quantum systems and determine their properties, including the results of measurements. • CO2: Use operator techniques to solve relevant problems. • CO3: Use the properties of angular momentum and spin to describe quantum systems such as the hydrogen atom and an electron in a magnetic field. • CO4: Use perturbation theory to find approximate solutions to more complex quantum mechanical systems • CO5: Understand various quantum mechanical features by solving various potentials: example, Finite and infinite well, Harmonic oscillator. • CO6: Learn Eigen values and Eigen functions of operators and computation of Clebsch–Gordan coefficients. • CO7: Application of Time-independent and time Dependent perturbation theory. • CO8: Apply the knowledge of Variational Methods for particle in box, Harmonic oscillator and Delta Function along with WKB approximation for classical Region and Tunneling. • CO9: Familiarizing students with the theoretical framework of non-relativistic quantum mechanics and its applications to simple problems.
MSc (Paper-V)	PHY 514 MJP (Elective): Communication Physics	<ul style="list-style-type: none"> • CO1: Describe the underlying theory of experiments in the course. • CO2: Perform derivations of theoretical models of relevance for the experiments in the course. • CO3: Follow instructions to perform laboratory experiments in Modern Physics, Optical communication and Electronics • CO4: Document their results, using correct procedures and protocols. • CO5: Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally

Class	Course	Outcome
		<p>or in a written laboratory report.</p> <ul style="list-style-type: none"> • CO6: Calculate permissible standard error in any physics experiment • CO7: Derive conclusions from the analysis of own data. • CO8: Assess the language used to describe physics experiments and how it can alter perceptions of the method and results
MSc (Paper-V)	PHY 514 MJ (Elective): Communication Physics	<ul style="list-style-type: none"> • CO1: To study the basic concepts regarding Digital Communication • CO2: To impart knowledge about Satellite Communication • CO3: Understand Digital Communication. • CO4: Identify Network organization. • CO5: Satellite Communication and their significance • CO6: Apply the knowledge of Digital Communication systems.
MSc (Paper-VI)	PHY 505 MJP: Basic Physics Laboratory-I (BPL-I)	<ul style="list-style-type: none"> • CO1: Describe the underlying theory of experiments in the course. • CO2: Perform derivations of theoretical models of relevance for the experiments in the course. • CO3: Follow instructions to perform laboratory experiments in Optics, Thermodynamics, Mechanics, Modern Physics, Electronics and Electromagnetics, Laser and Solar energy. • CO4: Document their results, using correct procedures and protocols. • CO5: Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant. • CO6: Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally or in a written laboratory report. • CO7: Calculate permissible standard error in any physics experiment • CO8: Derive conclusions from the analysis of own data.
MSc (Paper-VII)	PHY 541 MNP (Research Methodology)	<ul style="list-style-type: none"> • Apply the discrete distributions in real life problem. • Understand the concept of time series with its components. • Understand basics of R environment. • Perform various operations on data in R
MSc (Paper-VII)	PHY 541 MN (Research Methodology)	<ul style="list-style-type: none"> • Obtain summary statistics of a continuous random variable. • Obtain probability of events related to continuous random variable. • Identify whether variables are independent. • Obtain correlation and regression lines, m.g.f., moments, probabilities for bivariate continuous random variable. • Explain probability distributions, nature of curve, properties of continuous uniform, exponential, normal, gamma distributions and relations between them.
MSc (Paper-VIII)	Cyber Security I	<ul style="list-style-type: none"> • CO1: To study cyber security laws. • CO2: To study ethical hacking. • CO3: To study cyber security protection. • CO4: To study week /Strong password and password

Class	Course	Outcome
MSc (Paper-IX)	Human Rights I	<ul style="list-style-type: none"> • CO1: To understand the meaning and concept of vulnerable and this advantage. • CO2: TO understand the socioeconomic and cultural problems of vulnerable and disadvantage group. • CO3: TO understand social status of human and children in national and international level. • CO4: To understand human rights of vulnerable group such as stateless persons, Migrant workers, HIV /AIDS victims

Semester II

Class	Course	Outcome
MSc (Paper-I)	PHY 551 MJ: Solid State Physics	<ul style="list-style-type: none"> • CO1: Understand characteristic physical properties of different categories of solid materials, with an emphasis on the crystalline state. • CO2: How a wide spectrum of theoretical approaches to model the mechanical, thermal and electrical properties of solid materials. • CO3: Do quantitative calculations based on established theoretical models to describe the properties of materials. • CO4: Use of Fourier Transform methods, including reciprocal space, as an analytical tools to perform and analyze basic diffraction experiments to gain information about atomic scale structures. • CO5: Analyze solid-state problems using mathematical and numerical methods. • CO6: Account for the role of solid-state physics for technology and society as well as links between solid state physics and other main branches of physics.
MSc (Paper-II)	PHY 552 MJ Electrostatics	<ul style="list-style-type: none"> • CO1: Define the Biot-savart law, Amperes law, Coulombs law, Electric field, Electric susceptibility, Magnetic field & Faradays law. • CO2: Explain method of electrical images, equation of continuity, Magnetic vector potential, B.H curve, Maxwell's equation & wave equations. • CO3: Solve numerical problem on coulombs force, magnetic induction, magnetic permeability and induced voltage, magnitude of electric & magnetic vectors. • CO4: Determine work done by charges, total charge, force on the wire in different symmetry. • CO5: Summarize pointing vector, polarization, reflection & refraction. • CO6: Apply Biot-Savart law in different symmetry problem. • CO7: List the applications of Amperes law, Biot-Savart law, Poynting theorem. • CO8: Elaborate magnetic properties of the material.
MSc (Paper-III)	PHY 553 MJ: Atomic and Molecular Physics	<ul style="list-style-type: none"> • CO1: To understand the basic physics concepts of atomic and molecular spectroscopy. • CO2: To impart knowledge about different spectroscopic techniques. • CO3: Understand the interaction of atoms in strong and weak magnetic field. • CO4: Identify the different bonding mechanisms in strong and weak magnetic field. • CO5: Understand different spectroscopic techniques and their significance

Class	Course	Outcome
MSc (Paper-IV)	PHY 554 MJ: Basic Electronics	<ul style="list-style-type: none"> • CO1: To study the basic knowledge of basic electronics. • CO2: To impart knowledge about latest competent used in appliances. • CO3: Understand power electronic devices and special function ICs • CO4: Apply the knowledge of course in industry
MSc (Paper-V)	PHY 564 MJ (Elective): Laser Physics	<ul style="list-style-type: none"> • CO1: To study the basic concepts regarding properties and applications of lasers. • CO2: To impart knowledge about identifying the types and its uses in industries. • CO3: Use of knowledge in Laser physics and Laser devices to analyze and quantify complex problems in the field of nanotechnology • CO4: The course will enable students to understand and appreciate the properties, application and their significance of the Lasers materials problem.
MSc (Paper-V)	PHY 564 MJP (Elective): Laser Physics	<ul style="list-style-type: none"> • CO1: Describe the underlying theory of experiments in the course. • CO2: Perform derivations of theoretical models of relevance for the experiments in the course. • CO3: Follow instructions to perform laboratory experiments in Optics and Lasers. • CO4: Document their results, using correct procedures and protocols. • CO5: Interpret relationships in graphed data and develop an intuition for alternative methods and communicate results from laboratory experiments, orally or in a written laboratory report. • CO6: Calculate permissible standard error in any physics experiment • CO7: Derive conclusions from the analysis of own data. • CO8: Assess the language used to describe physics experiments and how it can alter perceptions of the method and results.
MSc (Paper-VI)	Cyber Security II	<ul style="list-style-type: none"> • CO1: Overview of cyber security. • CO2: Overview of security threads and vulnerabilities • CO3: To study Cryptography/ Encryption/ • CO4: To Study security managements. • CO5: To study server managment and firewalls
MSc (Paper-VII)	Human Rights I	<ul style="list-style-type: none"> • CO1: To understand the meaning and concept of vulnerable and this advantage. • CO2: TO understand the socioeconomic and cultural problems of vulnerable and disadvantage group. • CO3: TO understand social status of human and children in national and international level. • CO4: To understand human rights of vulnerable group such as stateless persons, Migrant workers, HIV /AIDS victims

Class	Course	Outcome
MSc (Paper-VIII)	PHY 564 MJ (Elective): Laser Physics	<ul style="list-style-type: none"> • CO1: To study the basic concepts regarding properties and applications of lasers. • CO2: To impart knowledge about identifying the types and its uses in industries. • CO3: Use of knowledge in Laser physics and Laser devices to analyze and quantify complex problems in the field of nanotechnology • CO4: The course will enable students to understand and appreciate the properties, application and their significance of the Lasers materials problem.

Semester III

Class	Course	Outcome
MSc (Paper-I)	PHCT-231 Statistical Mechanics	<ul style="list-style-type: none"> • CO1: Describe transport phenomena and compute coefficient of thermal conductivity, viscosity and diffusion in terms of mean free path • CO2: Define and discuss the concepts and roles of thermodynamic functions from the view point of statistical mechanics • CO3: Derive Binomial distribution and Gaussian probability distribution using random walk problem and calculate mean values for a statistical system • CO4: Discuss the concepts of microstate and macro state, basic postulates and behavior of density of states for model system and calculate the number of microstates for different statistical systems • CO5: Differentiate thermal, mechanical and general interaction between statistical system • CO6: Derive and compare Maxwell Boltzmann, Bose-Einstein and Fermi-Dirac distributions; state where they are applicable and explain the connection between Classical • CO7: Derive probability distribution formula for micro canonical, canonical ensemble and calculate mean values in canonical ensemble • CO8: Discuss applications for canonical ensemble.

Class	Course	Outcome
MSc (Paper-II)	PHCT-232 Solid State Physics	<ul style="list-style-type: none"> • CO1: Understand characteristic physical properties of different categories of solid materials, with an emphasis on the crystalline state. • CO2: How a wide spectrum of theoretical approaches to model the mechanical, thermal and electrical properties of solid materials. • CO3: Do quantitative calculations based on established theoretical models to describe the properties of materials. • CO4: Use of Fourier Transform methods, including reciprocal space, as an analytical tools to perform and analyze basic diffraction experiments to gain information about atomic scale structures. • CO5: Analyze solid-state problems using mathematical and numerical methods. • CO6: Account for the role of solid-state physics for technology and society as well as links between solid state physics and other main branches of physics.
MSc (Paper-III)	PHCT-233 Experimental Techniques in Physics-I	<ul style="list-style-type: none"> • CO1: Students are able to know signal and signal Analysis. • CO2: Student will able to take measurement errors and analysis. • CO3: Explain the Optical Tweezers (basic principle, force detection and applications). • CO4: what is vacuum? Important and fields applications of vacuum. • CO5: Principles of pumping concept, Types of vacuum pumps: Rotary, Molecular drag, Diffusion, Cryogenic, Getter, Titanium sublimation, Sputter ion, Orbiton. • CO6: Explain Vacuum Measurements and Low Temperature Technique. • CO7: What Vacuum Gauges: McLeod, Thermocouple (Pirani), Penning, Hot cathode ionization (triode type), Bayard-Alpert Leak detection, Vacuum system design. • CO8: Discuss the concepts of Low temperatures techniques: Refrigeration principle (including thermodynamical aspects) and low temperature production techniques (Throttling process)
MSc (Paper-IV)	PHOT 234 H2: Energy Studies-I	<ul style="list-style-type: none"> • CO1. Students become capable of conducting energy audits and give consultancy in that field. • CO 2. Students can design different types of solar heaters for small domestic as well as large scale community level applications. • CO3. Students acquire skills to implement solar P-V systems at domestic levels as well as for office premises and educational institutions. Students become able to start their own enterprise in net metering. • CO4. Students get ideas and hence become self-employed in the field of design, production, commissioning and implementation of bio-mass energy sources, bio-gas plants, gasifiers, wind mills, hybrid systems etc. • CO5. Students can go for research in the fields of super-capacitors, battery technologies, fuel cells and material synthesis for implementation of these technologies. • CO6. Students become successful entrepreneurs in the energy field. Students strive to make the regions where

Class	Course	Outcome
		they live and work self-sufficient in generating and fulfilling their own energy needs using different energy solutions.
MSc (Paper-IV)	PHOP 234H2: Energy Studies-I	<ul style="list-style-type: none"> • CO1: To study of Determination of Calorific value of Wood/Cow dung. • CO2: To Study of Optical Properties of selective coatings. • CO3: Determine the I-V and P-V characteristics of PV module with varying intensity of solar radiation. • CO4: To Study of Study of power versus load characteristics of Solar Power Photovoltaic Systems. • CO5: To Study of Study of Series and Parallel Combination of Solar Photovoltaic panels. • CO6: To Study of Study of Solar Collector (Efficiency versus $\Delta T/I$).
MSc (Paper-V)	PHCP-235 Physics Laboratory III	<ul style="list-style-type: none"> • CO1: Describe the underlying theory of experiments in the course. • CO2: Perform derivations of theoretical models of relevance for the experiments in the course. • CO3: Document their results, using correct procedures and protocols. • CO4: Perform a quantitative analysis of experimental data including the use of computational and statistical methods where relevant. • CO5: Interpret relationships in graphed data and develop an intuition for alternative plotting methods and communicate results from laboratory experiments, orally or in a written laboratory report. • CO6: write a project report with literature review. • CO7: defend the outcome of project work in scientific
MSc (Paper-VI)	Skill Development-I	<ul style="list-style-type: none"> • CO1: To understand the basic concept of human values. • CO2: To understand the meaning and significance of human rights education. • CO3: To understand the perspectives of rights and duties. • CO4: To understand terminology of various legal instruments. • CO5: To understand the final provision (art30)
MSc (Paper-VII)	Cyber Security III	<ul style="list-style-type: none"> • CO1: To study cyber security laws. • CO2: To study ethical hacking. • CO3: To study cyber security protection. • CO4: To study week /Strong password and password

Semester IV

Class	Course	Outcome
MSc (Paper-I)	PHCT -241 Nuclear Physics	<ul style="list-style-type: none"> • CO1: Define threshold voltage, dead time and recovery time in GM counter, threshold energy, nuclear fission, nuclear fusion, critical size, critical mass. • CO2: Determine the basic properties of nucleus. • CO3: Classify nuclear radiations, elementary particles and nuclear states, nuclear detectors. • CO4: Compose baryons and mesons with Quark model.

Class	Course	Outcome
		<ul style="list-style-type: none"> • CO5: Derive expression for energy of ions and frequency of RF signal in cyclotron, Q- value equation, threshold energy, and decay constant. • CO6: Estimate binding energy from fission • CO7: Justify nuclear reactions using conservation laws • CO8: Explain the different processes by which energetic particles interact with matter, kinematics of various reactors and decay processes.
MSc (Paper-II)	PHCT 242 Experimental Techniques in Physics-II	<ul style="list-style-type: none"> • CO1: What are Sources of Electromagnetic Radiations and what are Different types of radiations (-rays, X-rays, UV-VIS, IR, microwaves and nuclear) and their sources. • CO2: What are Detectors: -rays, X-rays, UV-VIS, IR, microwaves and nuclear Detectors. • CO3: what are Structural Characterization and Thermal Analysis have been studied like what is x-ray and production of x-rays and its types • CO4: Explain Techniques used for XRD like Laue's method, rotating crystal method, Powder (Debye-Scherrer) method, • CO5: Explain Neutron Diffraction: Principle, Instrumentation and Working • CO6: What is Morphological and Magnetic Characterization have been studied. • CO7: what is Optical Microscopy and electron Microscopy? • CO8: Explain Electron Microscopy: Principle, Instrumentation and Working of Scanning Electron Microscope (SEM), Field Emission Scanning Electron Microscope (FESEM) Advantages over SEM, Transmission Electron Microscope (TEM), Selected Area Electron Diffraction (SAED). • CO9: What is Probe Microscopy and its Principle, Instrumentation and Working of Scanning Tunneling Microscope (STM) and Atomic Force Microscope (AFM) have been explained. • CO10: What is Magnetic Characterization and its Principle, Instrumentation and Working of Vibrating Sample Magnetometer (VSM), Analysis of Hysteresis loop, SQUID Technique: Principle, Instrumentation and Working and Numericals has been studied. • CO11: What is Spectroscopic Analysis and Spectroscopic characterization (principle, instrumentation and working): Infra-Red (IR), Fourier Transform Infra-Red (FTIR), Ultraviolet-Visible (UV-VIS), Diffused Reflectance Spectroscopy (DRS), X-ray Absorption (XPS), Electron Spin Resonance (ESR), Nuclear Magnetic Resonance (NMR). Numerical has been explained.
MSc (Paper-III)	PHOTC2-244: Laser and Applications	<ul style="list-style-type: none"> • CO1: Explain the interaction of radiation with matter, Quantum behavior of light, thermal equilibrium, and population inversion. • CO2: Illustrate the absorption, spontaneous and stimulated emission with appropriate diagrams. • CO3: Derive the Einstein's relation, conditions for large stimulated emission and light amplification. • CO4: Distinguish between ordinary light and laser light. • CO5: Define the characteristics of laser light.

Class	Course	Outcome
		<ul style="list-style-type: none"> • CO6: Classify between lifetime broadening, collision and Doppler broadening. • CO7: List the types of lasers. • CO8: Discuss the applications of lasers in various fields.
MSc (Paper-III)	PHOPC2-244: Laser and Applications	<ul style="list-style-type: none"> • CO1: To determine wavelength of He-Ne laser using grating element. • CO2: To determine wavelength of He-Ne laser using measuring scale. • CO3: To determine spot size of laser using knife edge. • CO4: To determine divergence of laser beam. • CO5: To determine energy and power of laser beam. • CO6: To determine diameter of wire using laser. • CO7: To measure contamination in liquid sample using laser beam. • CO8: Use of laser in optical fiber communication.
MSc (Paper-IV)	PHOT-244 Energy Studies II	<ul style="list-style-type: none"> • CO1. Students become capable of conducting energy studies. • CO2: Explain the concept of Solar Dryer and Solar Still. • CO2: Explain basic principle of wind energy conversion, Vertical axis wind mills and Horizontal axis wind mills (Performance, Merits and Demerits). • CO3: Explain the application of street light, water pumps, Radio/TV, Small capacity power generation SPV Systems • CO4: To Designing the load estimation, selection of inverters, battery sizing, array sizing. • CO5: Hydrogen Fuel: Importance of Hydrogen as a future fuel, Sources of Hydrogen. Production of Hydrogen by various methods (Direct electrolysis of water, Direct thermal decomposition of water).
MSc (Paper-IV)	PHOP-244 Energy Studies II	<ul style="list-style-type: none"> • CO1: To study of determination of overall heat Loss Coefficient in Evacuated Tube Collector. • CO2: To study of determination of overall heat Loss Coefficient in Flat Plate Collector. • CO3: To study of Solar Dryer. • CO4: To Study of Solar Still. • CO5: To Study of Performance Evaluation of Box Type solar cooker. • CO6: To Study of Parabolic Type Solar Cooker. • CO7: To Study of determination of Energy content in wind using anemometer. • CO8: To Study of evaluate the performance of Fresnel lens solar concentrator.
MSc (Paper-V)	Cyber security-IV	<ul style="list-style-type: none"> • CO1: Overview of cyber security. • CO2: Overview of security threads and vulnerabilities • CO3: To study Cryptography / Encryption / • CO4: To Study security managements.
